

Waters™

OneLab Design & Execute

Unique software for the design and execution of lab protocols.

The pace of innovation in current day biological research demands the highest levels of reproducibility and traceability. Waters division for automation solutions (formerly Andrew Alliance), has developed an intelligent cloud-based software environment called OneLab within which experiments can be intuitively designed, repeatably executed, and tracked through a rapidly evolving ecosystem of connected devices and accessories that it is building together with partner organisations. Waters division for automation solutions has developed the Andrew+ Pipetting Robot and the Pipette+ Intelligent Pipetting System, both of which seamlessly connect with OneLab.

Waters division for automation solutions is constantly adding new capabilities, accessories and consumables to OneLab as indicated by this catalog which is updated on a regular basis.

Compatible

Incompatible

« on-the-fly »: Only on-the-fly dispensing is possible 1 500

Numeric value: The minimal volume in µL that the consumable must contain to allow the use of the pipette in OneLab

For more information about the care and use of Dominos and Devices, please check out our articles in the Help Center.

Manufacturer: Agilent Technologies

Part number: 201284-100

Agilent 6-column reagent reservoir

Agilent reagent reservoir; Partitioned - 6 compartments columns holding 47 mL each (a total reservoir capacity of 282 mL); Features 24 pyramid base geometries for maximum recovery; Deep-well format; Standard plate footprint and dimensions; Ideal for containing liquids (e.g. buffer, mild solvents , etc...) for multichannel pipetting needs; Can be used for storage

Part number: AWLS-S30028

ArcticWhite, 7 mL 12-column low-profile reservoir

ArcticWhite, 7 mL 12-column partitioned reservoir; Pyramid, V-shaped bottom for maximum sample recovery; Low-profile design; Used with an automated system, it allows for 8-channel pipetting of reagents or working solutions column-wise into a 96-well plate; Used manually; it allows to transfer 8 or 12 different samples simultaneously into an entire column or row of a 96-well plate, respectively, with a multichannel pipette as the 9 mm reservoir well spacing matches plate spacing

Manufacturer: ClickBio

Part number: CBVBLOK200-1

Clickbio, VBLOK 200 mL V-bottom reservoir

200 mL V-bottomed reservoir with a low dead volume of < 1 mL; Made of virgin, medical-grade polypropylene (PP); Features a high-polish inner surface to ensure all liquid pools in the V-bottom channel for maximum sample recovery; Originally designed as a centrifuge collection vessel to recover or pool liquids from multi-well plates – the VBLOK200 reservoir can support inverted plates, turned downward towards the bottom of the reservoir, and subsequently undergoes centrifugation as an assembly to quickly collect/remove all liquid from a 24-, 96-, 384-, or 1536-well plate without using pipette tips, thereby improving sample recovery compared to manual or automated pipetting from each well; Can be used as a low dead volume reagent reservoir for 8-channel pipetting, ideally in automation workflows where reagent waste reduction is paramount – the unique design funnels all liquid to the center where it is accessible for pipetting with an 8-channel pipette; Suitable for applications, such as Next Generation Sequencing (NGS) library pooling, recovery of antigen or primary antibodies during ELISA plate preparation, and coating tissue culture plates; Conforms to ANSI/SLAS microplate standards – Automation-compatible reservoir; E-beam sterilization is optional

Ordering product number : 186010090

Manufacturer: DWK Life Sciences

Part number: 218010851

DURAN® 10 mL clear glass laboratory bottle in 2x3 position holder

DURAN® 10 mL original laboratory bottle; with GL 25 thread; 33x55 mm size; Moulded from high-purity, clear, type I borosilicate glass 3.3 - guarantees high chemical resistance, virtual inert behavior, and a high maximum temperature tolerance with minimal thermal expansion; Loaded into a DURAN® ANSI/SLAS microplate aluminum holder (DWK LS, p/n 292330802) that accommodates up to six bottles in a 2x3 arrangement, allowing small DURAN® 10 mL GL 25 bottles to be used on the deck of many liquid handling robots and automated pipetting systems; The holder conforms to microplate footprint dimensions in the ANSI/SBS standards; DURAN® laboratory bottles provide high light transparency for easy content and volume checking; Characterized by a uniform wall thickness; Very steady due to a large base; Feature an easy-to-read graduated volume scale and a highly durable white marking field; Considered the gold standard of multifunctional laboratory bottles; Ideal for long-term storage, sample preparation, transport, and autoclaving media; Can be used in stability testing of new drug substances as analogs for the larger DU-RAN® bottles; Serves as a robust, thicker-walled alternative to vials made from glass tubing; The combination of high-performance materials and robust design provides long working life; The DURAN® aluminum holder achieves high thermal conductivity and therefore can be used with microplate heating or cooling systems; DURAN® laboratory bottles should be heated gradually when using an electronic heating plate or water bath; NOT suitable for use under pressure or in a vacuum; Supplied complete with a matching blue polypropylene (PP) screw cap equipped with dripfree pouring ring for use up to 140°C – achieves tight sealing and simple, clean pouring; Suitable for autoclaving - all components are fully autoclavable at 121 or 134°C

DURAN® 50 mL amber glass laboratory bottle

DURAN® 50 mL original laboratory bottle; with GL 32 thread; 46x91 mm size; Manufactured from ambered, type I borosilicate glass 3.3 – provides excellent thermal performance and high resistance to chemical attack; Displays uniform wall thickness and a very steady due to large base; The only external application of a durable amber layer guarantees that light-sensitive contents are protected from the effects of photodegradation while ensuring that internal surfaces maintain standard DURAN® glass properties; Protection against ultra-violet light conforms to standards with less than 10% spectral transmission between 290 nm and 450 nm; DURAN® is a neutral glass (classified as Glass Type I) well suited to applications in the pharmaceutical industry; Features an easy-to-read scale with graduation marks and a marking area in highly durable, white ceramic print; Supplied complete with a blue polypropylene screw cap and pouring ring for use up to 140°C – ensures tight sealing and simple, drip-free pouring; All components are autoclavable at 121 or 134°C

250mL DURAN bottle Domino [218.3701]

Ordering product number: 186010193

Manufacturer: NOVOPLAST Part number: 591.012.01.00

NOVOPLAST, 250 mL square bottle in Cytiva, 3x6 position rack

250 mL storage bottle; Square shape; 65x115 mm size; 42 mm opening; Made of opaque, white High-density polyethylene (HDPE); Supplied without cap – Compatible PP screw caps available separately (NOVOPLAST, p/n 199.401.01.00); Suitable for storage of powders; Loaded into a Cytiva, 3x6 position rack that can accommodate up to 18x 250 mL bottles (Cytiva, p/n 28981873); For use with the automated Fraction collector F9-C intended to collect fractions from purification runs when combined with the ÄKTA pure chromatography microsystem, which is designed for protein purification in research applications; Can be used with the ÄKTA avant chromatography system designed for fast and secure development of scalable protein purification methods and processes; The loaded rack is inserted into the fraction collector without using a Cassette tray

Ordering product number:

Manufacturer: Corning Inc.

Part number: 1397-500

PYREX® 500 mL wide-mouth storage bottle

PYREX® 500mL wide-mouth media storage bottle; Round shape; Threaded top; Features an autoclavable linerless, one-piece PP plug seal GLS80 threaded cap with a drip-free pouring ring; Heavy-walled bottle with an extra wide-mouth for easy access to pouring and removing pastes and powders as well as cleaning; With permanent graduations and marking spot; Offers high chemical and thermal resistance; Ideal for sampling, mixing and storage (e.g. reagents, sterile cell culture media, aqueous solutions, etc...); Reusable and can be sterilized by autoclaving; NOT recommended for use with bottle-top filter units or other applications involving vacuum or pressure due to possible breakage; NOT designed for direct contact heating; DO NOT tighten caps immediately after autoclaving as the vacuum resulting from cooling can cause breakage!

Manufacturer: Thermo Scientific

Part number: 9510047

Thermo Scientific™ 100 mL reagent reservoir

Thermo Scientific™ reagent reservoir; White; 100 mL capacity; Features a "trough within a trough" design to maximize the amount of liquid accessible to pipette tips when using small amounts of reagent – maximum recovery design; Equipped with graduation lines on the inside wall to enable quick measurement of remaining liquid and pour-off sprouts in all four corners to reduce spillage when pouring reagents out of the reservoir; Exhibits an extra-wide base that adds rigidity and stability to reservoir for safe handling and use; Designed for multiple pipetting applications; Intended for single-use – disposable

CHIPS & DEVICES

Manufacturer:Analytical Sales & Services, Inc.

Part number: 24253

24-well photoredox block assembly

Standard 24-well photoredox block assembly (p/n 24253) - includes vial rack, bottom & top covers, PFA films, rubber mats, and screws; Vials not included - to use with 1 mL clear glass shell vials, 8x30 mm size (p/n 84001-CASE); Within the reaction block, silicone rubber mats provide compression sealing (3 mats/plate - two on top and one on the bottom of the plate), while chemically compatible Teflon® PFA films provide a seal on top and a protection for vials on the bottom (prevent glass reaction vials form sticking to the silicone mat during heating); This sealing strategy ensures reduced solvent loss even with prolonged heating (< 5% solvent loss); Can be used on magnetic tumble stirrers and hotplate stirrers; Designed specifically for high-throughput reaction screening (HTS) applications - conduct screening of reaction conditions; Useful in medicinal chemistry - photoredox catalysis to perform direct C-H functionalization of synthetic intermediates and drug leads; The standard ANSI/SLAS format block allows for use with automation/robotic platforms

Manufacturer: ProteinSimple

Part number: PS-PP03

ProteinSimple, Wes/Jess plate

Specially-designed assay plate for use with Wes and Jess systems to run Simple Western assays - Separation and analysis of proteins by size from 2-440 kDa by capillary-based immunoassay (chemiluminescence or fluorescence), generating quantitative, size-based data including total protein; Plate is pre-filled with separation matrix, stacking matrix, split running buffer and matrix removal buffer; Samples (e.g. protein lysate) and reagents (including ladder, antibodies, substrate mix, wash buffer) are added to the microplate during preparation step - analysis requires only 3 µL of sample per capillary; The evaporation foil is peeled off after centrifugation (at 2500 r.p.m) when placing the plate in the device; Allows analysis of up to 25 samples in 3 hours - throughput flexibility thanks to the possibility of using either 13- or 25-Capillary Cartridges; All assays steps from protein separation, immuno-probing, detection, and analysis are fully automated; Sensitivity ranges between ng and pg levels; Disposable; NOTE: Wes/Jess plate, part # PS-PP03, covers molecular weight range from 12-230 kDa

Ordering product number:

Manufacturer: Unchained Labs

Part number: N/A

Unchained Labs, Big Lunatic plate

Big Lunatic plate; Polystyrene frame; SBS-compatible microplate format; Fits up to 6 individual Lunatic strips; For use with Big Lunatic UV/Vis reader for quantification of protein and nucleic acids; Lunatic strips feature 16 proprietary microfluidic circuits moulded from a low-absorbance cyclic olefin copolymer (COC) plastic - allow high optical transmission over the full UV-VIS spectrum with high accuracy and guarantee the absence of cross-contamination or evaporation; Each circuit contains five main features: conical-shaped input well, capillary storage channel (sample retention time = up to 2 hours without evaporation), measurement microcuvette(s) with fixed path length, overflow reservoir, and vent hole (connection point with the pump of the Lunatic system during a read); Two types of Lunatic strips can be mounted onto the big Lunatic plate: "Regular Lunatic strips" with single microcuvette in each circuit for low concentration samples, typically nucleic acids (0.5 mm path length, dynamic range = 0.03-40 O.D. 10 mm, [protein] = 0.03-40 mg/mL, [dsDNA] = 1.5-2,000 ng/µL) and "High Lunatic strips" with 2 adjacent microcuvettes for high concentration samples, typically proteins (0.1 and 0.7 mm pathlengths, dynamic range = 0.03-275 O.D. 10 mm, [protein] = 0.03-275 mg/mL, [dsDNA] = 1.5-13,750 ng/ μ L); Lunatic plates enable the analysis of up to 96 samples at a time in about 5 min using only 2 μ L of sample (16 samples per strip, 2 μL per circuit) – no dilution, dyes or extra reagents required; The Lunatic system performs high-speed UV/Vis spectral analysis - measures absorbances from 0.03-40 O.D. (regular Lunatic plate) or 0.03-275 O.D. (high Lunatic plate) for each sample across the full UV/Vis spectrum from 230-750 nm; Lunatic strips are compatible with most buffers used in life sciences research (e.g. Tween 80 10%, DMSO 100%, Triton X-100 0.01%, SDS 0.5%, etc...); Lunatic plates can easily be integrated with robotic liquid handlers for use with single or multichannel pipettes to enable hands-off, highthroughput analysis; The polystyrene and COC plastic of Lunatic consumables are halogen-free; The small sample requirement using Lunatic strips makes Lunatic system the perfect solution for many applications including measuring the concentration and purity of nucleic acid samples (DNA/RNA/oligos), incorporation of fluorescent dyes (pmol/µl) and degree of labeling of nucleic acid microarray samples, purified protein analysis, total protein from mixed samples such as cell lysates, full-length IgG and purified His-tagged IgG samples, quantification of fluorescently labeled proteins, API quantification (Active Pharmaceutical Ingredient), plasma QC, standard curve, and full UV/Vis spectral measurements

Part number: 8165

AcroPrep™ Advance 1 mL 96-well filter plate, 30K Omega membrane

AcroPrep™ Advance 96-well filter plate; 1 mL volume capacity; Round well shape; Well-bottom area of 0.25 cm²; Constructed from chemically resistant and biologically inert polypropylene (PP) - ensures maximum functionality while providing intrinsic low binding properties to nucleic acids (NA) and proteins, and durability when using harsh organic solvents, preventing unwanted extractables and leachables; Equipped with a Pall Omega™ membrane of 30K MWCO (Molecular weight cut-off = 30 kDa), which is a polyethersulfone (PES) membrane specifically modified to minimize protein and NA binding; Optimized for ultrafiltration, a membrane separation technique used to rapidly separate extremely small particles and dissolved molecules in fluids based on their molecular size, although other factors such as molecular shape and charge can also play a role - molecules larger than the membrane pores will be retained by the membrane and concentrated during the ultrafiltration process; The low binding nature of the PES membrane guarantees high recovery (≥ 90%) of target biomolecules at low concentration and less surface fouling, which can impede effective retention performance; Features a smooth well design that helps achieving faster, more uniform filtration rates across the plate (improving well-to-well and plate-to-plate consistency), as well as reduced hold-up volume for maximum sample recovery; Recommended working volume ≤ 900 µL; Can be used on vacuum systems, with centrifugation, or with positive pressure systems; Recommended operating vacuum ≥ 25.4 cm Hg (10 in. Hg); Typical vacuum filtration performance of 30K Omega membrane = 8 min processing time, 6 µL hold-up volume; Recommended centrifugal force 1,500 xg; Typical centrifugal filtration performance of 30K Omega membrane = 8 min processing time, 2 µL hold-up volume; Uses a unique sealing mechanism to individually seal filter media into each well of the plate, preventing crosstalk and reducing the risk of cross-contamination between wells; Exhibits optimized outlet tips that minimize sample leakage during incubation steps and reduce the presence of clinging droplets following filtration; Ideally used for labelling clean-up, nucleic acid (DNA/RNA) purification, and protein purification/separation by size exclusion; Suitable for high throughput procedures; Automation compatible - manufactured to meet the ANSI/SLAS microplate standards, allowing plates to be run in manual, semi-automated, and automated processes; The rigid, one-piece construction prevents the plate from flexing or jamming in robotic systems; Labeled wells facilitate easy sample identification; Each filter plate has a serialized barcode label that allows for easy, automated sample tracking and identification; The notch on the plate determines correct plate orientation; Features a smooth top surface and a textured window on the side of the plate for easy labelling

AcroPrep™ 7 mL 24-well Cell Clarification and Sterile Filtration plate

AcroPrep 24-well cell clarification and sterile filtration filter plate; 7 mL volume capacity; Square well shape; 1.6 cm² effective filtration area; Constructed from chemically-resistant and biologically-inert polypropylene; Utilizes Pall proprietary high-performance multi-layer filtration media and membranes integrated into one device - each well contains a Pall Seitz® depth media that efficiently captures whole cells and large cellular debris layered on top of a 0.65/0.2 µm asymmetric Supor® EKV PES (Hydrophilic polyethersulfone) membrane that provides an efficient sterile filtration layer; The Seitz depth media allows clarification of large cellular debris prior to filtration through the 0.65/0.2 µm EKV Supor membrane; The depth filter media have a high particulate holding capacity and will protect downstream microporous membrane filters from quickly clogging; Intrinsic plate and membrane properties minimize sample loss from non-specific binding while ensuring fast filtration with superior flow rates; Offers a one-and-done solution for protein purification and general sterile filtration workflows in a 24-well format; Suitable for use in a variety of applications including clone selection and clone candidate analysis, cell expansion studies, recombinant protein isolation prior to analysis, cell clarification, process optimization, and sterile filtration; Combining clarification and sterilization in a one-step workflow eliminates the need to harvest the cells in a centrifugation step, saving considerable time, reducing plastic consumable waste, and streamlining laboratory processes compared to the conventional two-step cell clarification and sterilization process; Allows clarification and sterile 0.2 µm filtering of proteins from a cell culture sample in a single device and one workflow step; Easily and quickly filter/recover proteins from CHO, HEK, or other whole-cell suspensions with densities as high as 25 M cells/mL or more using either a vacuum manifold or centrifuge, speeding up cell line development and clone screening - cells, cell debris, and other biological aggregates are captured in the filter media and the filtrate collected by the 24-well collection plate contains proteins and other sub-0.2 µm particles; Ensures reliable recovery of > 95% of extracellular proteins from whole-cell cultures; Offers time savings, strong performance claims, and streamlined workflow improvements; Ideal for laboratories that desire faster and more efficient protein purification workflows; Designed to meet the ANSI/SLAS microplate standards; The rigid construction prevents the plate from flexing or jamming in robotic systems; Exhibits a smooth well design that provides consistency in filtration times as well as efficient sample recovery; Can be used with either a vacuum manifold or compatible centrifuge and is fully compatible with all major laboratory automation platforms; Recommended operating vacuum ≥ 25.4 cm Hg (10 in. Hg); Recommended working volume (max), 7 mL for vacuum and 6 mL or centrifugation; Typical hold-up volume of 450 µL per well which refers to the volume of liquid retained in a filter or housing; Supplied individually bagged with a V-shaped bottom collection plate and a polystyrene lid; Barcode labeling allows for easy sample tracking and identification

Advantage™ 1 mL 96-well diatomaceous earth filter plate

Advantage™ 1 mL 96-well filter plate; Packed with flux calcinated diatomaceous earth; Stable from pH 1-13; No pre-treatment of the bed is necessary; Offers a large surface area; Used for sample filtration; Provides a high throughput alternative to traditional liquid-liquid extraction techniques; Eliminates steps like mixing, centrifugation, and organic phase separation; Achieves accelerated solvent extraction; Compatible with the majority of 96-well vacuum manifolds; Application procedure: Upon addition to the filter plate, the aqueous mixture (e.g. plasma sample and internal standard in buffer solution, adjusted pH) will partition by gravity. The appropriate organic solvent is then added to the wells pushing the analyte of interest to partition from the adsorbed aqueous phase into the organic solvent as the latter slowly flows through the particle bed under gravity. The organic eluent is collected, evaporated to dryness, and finally reconstituted before being injected for analysis; NOTE: the displayed plate image is NOT representative of the product

Part number: 96260-1

Advantage™ 2 mL 96-well diatomaceous earth filter plate

Advantage[™] 2 mL 96-well filter plate; Packed with flux calcinated diatomaceous earth; Stable from pH 1-13; No pre-treatment of the bed is necessary; Offers a large surface area; Used for sample filtration; Provides a high throughput alternative to traditional liquid-liquid extraction techniques; Eliminates steps like mixing, centrifugation, and organic phase separation; Achieves accelerated solvent extraction; Compatible with the majority of 96-well vacuum manifolds; Application procedure: Upon addition to the filter plate, the aqueous mixture (e.g. plasma sample and internal standard in buffer solution, adjusted pH) will partition by gravity. The appropriate organic solvent is then added to the wells pushing the analyte of interest to partition from the adsorbed aqueous phase into the organic solvent as the latter slowly flows through the particle bed under gravity. The organic eluent is collected, evaporated to dryness, and finally reconstituted before being injected for analysis; NOTE: the displayed plate image is NOT representative of the product

Biotage

Part number: 820-0200-P01

Biotage ISOLUTE® SLE+ 200 µL 96-well SLE plate

Biotage, ISOLUTE® SLE+ Supported Liquid Extraction 96-well plate; 200 μL maximum load volume and 1x1 mL elution volume; Square wells; Packed with a highly processed, homogenous, modified form of diatomaceous earth, serving as a support for the liquid-liquid extraction process, but does not interact chemically with the aqueous sample and providing reproducible flow characteristics from sample to sample; Used in bioanalytical sample preparation for supported liquid extraction (SLE) of a diverse range of analytes from aqueous samples such as biological fluids (e.g. whole blood, plasma, serum, urine, and oral fluid) using a simple loadwait-elute procedure; Achieves high extraction efficiency – during SLE, the aqueous sample is absorbed onto the extraction bed and analytes are immobilized on the inert diatomaceous earth-based support material forming the interface for extraction (small droplets held in place by a network of pores). When applied, the organic phase flows through the support media allowing analytes to efficiently desorb and partition into the organic solvent before being collected for analysis; Aqueous samples and extraction solvents load evenly, an important feature when using automated sample preparation procedures; Provides high analyte recoveries, eliminates emulsion formation, reduces sample preparation time, and delivers a clean final extract free of interfering proteins and phospholipids, thereby alleviating matrix effects associated with biofluid analysis; Suited to automated workflows with no manual intervention necessary; Processing ISOLUTE® SLE+ plates is largely performed under gravity, with a pulse of vacuum or positive pressure used to initiate loading of the sample, and to maximize solvent recover after elution - both manual and automated, vacuum or positive pressure systems can be used; To prevent cross-talk when processing plates, well outlets should penetrate the collection plate correctly

PRECAUTION

Insert the NucleoBond Xtra Midi column gently into the Domino slot. Pressing too hard will impact liquid handling and gripping performance.

MACHEREY-NAGEL, NucleoBond Xtra Midi column

NucleoBond® Xtra Midi column; Used in the NucleoBond® Xtra Midi kit for ultra-fast purification of transfection-grade DNA plasmids (high- and low-copy), cosmids, and very large constructs (P1 constructs, BACs, PACs) ranging from 3 kbp up to 300 kbp; Features a NucleoBond® Xtra silica resin packed between two inert filter elements; The unique silica-based anion-exchange resin consists of hydrophilic, macroporous silica beads functionalized with MAE (methyl-amino-ethanol) that specifically binds to DNA molecules; Silica resin can be used over a wide pH range (pH 2.5–8.5) - stable chromatographic properties; Gravity flow column in Midi format - typical DNA yield of 500 µg; Columns are chemically resistant to organic solvents (e.g. alcohol, chloroform, and phenol) and are suitable for use with buffers containing denaturing agents such as formamide, urea, or common detergents like Triton X-100 or NP-40; A specially designed depth filter is inserted ready-to-use in the column - allows high filter flow rates, simultaneous clearing of bacterial lysate and loading of cleared lysate onto the column (NO time-consuming centrifugation step for lysate clearing); NucleoBond® Xtra column filters allow complete removal of precipitate without clogging and preserve large DNA constructs, i.e. PACs or BACs, from shearing; Typical purity A260/A280 = 1.8-1.95

MACHEREY-NAGEL, NucleoSpin® 96 virus binding plate

NucleoSpin® 96-well plate is used for rapid, simultaneous isolation of viral RNA and DNA from serum, plasma, or any cell/particle-free biological fluids, and is a central element of the NucleoSpin® 96 Virus full (Ref. # 740691.4) and reduced (Core kit, Ref. # 740452.4) kits; Each well features a blue ring, and a silica membrane for DNA/RNA binding and filtration; Suitable for manual and automated use; Processing possible under vacuum or by centrifugation; Sample volume 100-150 μ L; Fragment size of 100 bp - approx. 50 kbp; Typical recovery > 90%; Theoretical binding capacity of 40 μ g; Purified nucleic acids are suitable for applications such as PCR, real-time quantitative RT-PCR, and any kind of enzymatic assays; NOTE: The «NucleoSpin® 96 Virus Core kit» offers more flexibility than the «NucleoSpin® 96 Virus kit» mostly regarding the choice of consumables used for lysis, washing, and elution, and is primarily recommended for manual or automated vacuum processing

Oasis HLB 96-square well plate, 30 mg sorbent/well

The Oasis HLB 96-well plate contains Oasis HLB sorbent (30 mg per well), which is a universal strongly hydrophilic, reversed-phase, polymer with a unique Hydrophilic-Lipophilic Balance that was developed for the extraction of a wide range of acidic, basic, and neutral compounds from various matrices using a simple, generic protocol. The unique balance of hydrophobicity and water-wettability of the Oasis HLB sorbent ensure optimal results regardless of whether individual wells of the 96-well plate could dry out during the critical steps prior to sample loading. The Oasis HLB 96-well plate is designed to be used on many manifold configurations and most robotic liquid handling systems. The particle size is 30 μm . The pore size is 80 Å. The Oasis HLB sorbent is stable from pH 0 - 14

Oasis HLB 96-well µElution plate, 2 mg sorbent/well

The patented Oasis HLB 96-well µElution plate is designed for SPE clean up and analyte enrichment of sample volumes ranging from 10 µL to 375 µL. Each well of the µElution plate contains 2 mg of the Oasis HLB sorbent, which is a universal strongly hydrophilic, reversed phase, polymer with a unique Hydrophilic-Lipophilic Balance for extraction of a wide range of acidic, basic, and neutral compounds from various matrices using a simple, generic protocol. The innovative features of Oasis µElution plate enabled elution in only 25 µL, resulting in sensitive, robust, reproducible results without evaporation and reconstitution. A 15-fold sample enrichment is possible with this plate. The Oasis HLB µElution plate is compatible with most liquid-handling robotic systems for automated, high throughput SPE. The particle size is 30 µm. The pore size is 80 Å. The Oasis HLB sorbent is stable from pH 0 - 14

Oasis HLB 1 cc Vac cartridge, 10 mg sorbent, 30 µm, racked

The Oasis HLB 1 cc Vac cartridge with 10 mg sorbent is loaded into the Extraction+ 1cc cartridge rack that accommodates up to 24 cartridges. The Oasis HLB 1 cc cartridge contains the Oasis HLB sorbent (10 mg sorbent per cartridge), which is a universal polymeric reversed-phase sorbent developed for the extraction of a wide range of acidic, basic, and neutral compounds from various matrices using a simple, generic protocol. The Oasis HLB sorbent is water wettable and therefore maintains its capability for higher retention and excellent recoveries even if the sorbent runs dry. This means that there is no need to take extraordinary steps to keep the sorbent beds from drying out during the critical steps prior to sample loading. The syringe-barrel-type cartridge is designed for use with vacuum manifolds and automated SPE instruments. The barrel size is 1 cc. The particle size is 30 μ m. Pore size is 80 Å. The Oasis HLB sorbent is stable from pH 0 - 14

Oasis method development 96 well µElution plate, 2 mg sorbent/well

The Oasis method development 96-well μ Elution plate is specially designed to carry out SPE method development. The patented 96-well plate format contains 3 columns of each of the four Oasis mixed-mode, ion-exchange chemistries (2 mg sorbent per well): strong and weak anion exchangers (MAX and WAX) and strong and weak cation exchangers (MCX and WCX). Sample preparation method development can be quickly and easily achieved with the use of only two SPE protocols. The Oasis Sorbent Selection μ Elution plate is compatible with most liquid-handling robotic systems for automated, high throughput SPE. The particle size is 30 μ m. The pore size is 80 Å. The Oasis sorbent is stable from pH 0 - 14

Oasis PRIME HLB 96-well µElution plate, 3 mg sorbent/well

The Oasis PRiME HLB 96-well µElution plate contains Oasis PRiME HLB sorbent (3 mg per well), which is an all-purpose, strongly hydrophilic, reversed-phase, water-wettable polymer with a unique Hydrophilic-Lipophilic Balance. Oasis PRiME HLB sorbent is designed to simplify solid-phase extraction (SPE) by taking advantage of the desirable water-wettable and retention characteristics of Oasis HLB sorbent technology while providing cleaner samples in fewer steps and excellent recoveries due to simpler protocols and the elimination of sorbent conditioning and equilibration steps. It enables reversed-phase clean-up of acidic, basic and neutral compounds form complex sample matrices. Oasis PRIME HLB produces cleaner samples by removing greater than 95% of common matrix interferences such as salts, proteins and phospholipids. Additionally, viscous samples can be processed with faster flows through the device and less plugging

Oasis PRiME HLB 96-well plate, 10 mg sorbent/well

The Oasis PRiME HLB 96-well plate uses Oasis PRiME HLB sorbent (10 mg per well), introducing the new performance standard for solid phase extraction (SPE) clean-up in routine analysis. The Oasis PRiME HLB sorbent provides reversed-phase clean-up of acidic, basic and neutral compounds form complex sample matrices. The Oasis PRiME HLB chemistry is designed to simplify SPE while producing cleaner samples by removing greater than 95% of common matrix interferences such as salts, proteins and phospholipids. Additionally, viscous samples can be processed with faster flows through the device and and less plugging. Based on the Oasis HLB sorbent technology, this water-wettable sorbent does not require conditioning and equilibration to provide excellent recoveries

Oasis PRIME HLB 96-well plate, 30 mg sorbent/well

The Oasis HLB 96-well plate contains Oasis HLB sorbent (30 mg per well), which is a universal strongly hydrophilic, reversed-phase, polymer with a unique Hydrophilic-Lipophilic Balance that was developed for the extraction of a wide range of acidic, basic, and neutral compounds from various matrices using a simple, generic protocol. The unique balance of hydrophobicity and water-wettability of the Oasis HLB sorbent ensure optimal results regardless of whether individual wells of the 96-well plate could dry out during the critical steps prior to sample loading. The Oasis HLB 96-well plate is designed to be used on many manifold configurations and most robotic liquid handling systems. The particle size is 30 μ m. The pore size is 80 Å. The Oasis HLB sorbent is stable from pH 0 - 14

Oasis PRIME MCX 96-well µElution plate, 2 mg sorbent/well

The Oasis PRiME MCX 96-well µElution plate contains Oasis PRiME MCX sorbent (2 mg per well), a Mixed-mode, strong Cation eXchange, reversed-phase, water-wettable polymer. Oasis MCX technology allows targeted clean-up of basic compounds with pKa \geq 4.5. Oasis PRiME MCX combines the simplicity and cleanliness of Oasis PRiME HLB technology with the specificity of a cation-exchanger for basic compounds. It selectively retains and concentrates basic compounds while removing up to 99% of interfering phospholipids from complex biological matrices (e.g. serum, plasma, whole blood) using simple three- or four-step protocols that deliver cleaner samples faster than conventional mixed-mode solid phase extraction (SPE) methods. It provides high and reproducible target analyte recoveries. No conditioning or equilibration steps are required prior to use. The particle size is 30 µm. The Oasis MCX sorbent is stable in organic solvents

Oasis PRiME MCX 1 cc Vac cartridge, 30 mg sorbent, 30 µm, racked

The Oasis PRiME MCX 1 cc Vac cartridge with 30 mg sorbent is loaded into the Extraction+ 1cc cartridge rack that accommodates up to 24 cartridges. The Oasis PRiME MCX 1 cc Vac cartridge contains Oasis PRiME Mixed-mode, strong Cation eXchange (MCX) sorbent (30 mg per cartridge), which is built upon the unique water-wettable Oasis PRiME HLB polymer. The Oasis PRiME MCX sorbent provides both reversed-phase and ion exchange modes of retention, enabling greater clean-up selectivity and sensitivity for basic compounds. Using Oasis PRiME MCX sorbent, improved sample clean-up is achieved with simple and fast SPE protocols (no conditioning and equilibration steps are required). Up to 99% of phospholipids are removed from complex sample matrices while providing high and reproducible target analyte recoveries. The syringe-barrel-type cartridge is designed for use with vacuum manifolds and automated SPE instruments. The barrel size is 1 cc. The particle size is 30 μ m. The Oasis PRiME MCX sorbent is stable in organic solvents

Ostro protein precipitation & phospholipid removal 96-well plate

The Ostro pass-through sample preparation plate provides a novel solution for the rapid and simple removal of phospholipids from biological samples (e.g. plasma and serum) prior to LC/MS-MS analysis. Requiring minimal to no method development and using a simple protocol, the Ostro™ technology can be quickly implemented to optimize your laboratory's workflow. Providing cleaner, more reproducible extracts than competitive phospholipid removal devices or techniques (e.g. liquid-liquid extraction-LLE, protein precipitation-PPT and and solid-supported liquid-liquid extraction-SSLE), The Ostro approach allows for more sensitive analyses, increased sample throughput, and reduced instrument downtime. Using a convenient 96-well format, in-well protein precipitation is performed with a single pass-through method, which provides consistent, high-quality results, including significant removal of phospholipids, optimal recovery for diverse analytes, and increased reproducibility for more robust methods. The sorbent weight is 25 mg. The Ostro sorbent is stable from pH 0 - 14

Part number: 60304-201

Thermo Scientific™ HyperSep™ 96-well PPT plate

Thermo Scientific™ HyperSep™ 96-well Protein precipitation plate; Square wells; Made of polypropylene (PP) specially selected to ensure low extractables; Intended for simple, rapid protein precipitation (PPT) and filtration to separate and recover target small molecules from the protein matrix of complex biofluids, such as plasma or serum that can interfere with downstream analysis; Features a novel dual frit, hydrophobically treated matrix that ensures no "wetting out" of the filter and leakage of the sample through the plate before the application of vacuum; Frits are hydrophobic/oleophobic enabling only precipitation of proteins – sample/ acetonitrile are retained in the well to allow precipitation of the proteins only when the vacuum is applied; The pore size of the frits is optimized to allow ideal and consistent flow rate of the sample through each well when the vacuum is applied – results in better reproducibility from well to well and sample to sample; The non-specific binding property of the filter material maximizes the recovery of target analytes/compounds; Achieves effective removal of unwanted proteins using the CRASH method in which the protein is denatured with acetonitrile and the flocculant filtered out, allowing 96 samples to be processed at one time - protein 'crashes' out of solution and precipitates directly into each well when acetonitrile is added; Can process between 15-1600 µL of serum of plasma samples; Ideal for use in automated, high throughput systems; Constructed according to an industry-standard 96-well plate footprint

Waters Sirocco™ 96-well protein precipitation plate

Waters Sirocco™ 96-well protein precipitation plate, co-developed with Pall Life Sciences, is the most technologically advanced protein precipitation plate on the market. The Sirocco™ plate enables high-throughput «inwell» protein precipitation of biological samples, guaranteeing no cloudy filtrates or clogged devices. The 96-well plate comprises a unique filter system, a sealing cap mat, and a patented valve technology designed specifically to allow efficient «in-well» processing while preventing clogged wells, cross-talk or leaking during use. It provides optimum performance in faster processing time by reducing steps in «in-well» sample processing and complete recovery of clean filtrate from smaller plasma sample volumes

Abgene™ 0.8 mL 96-deep well storage plate

Abgene™ 0.8 mL 96-deep well storage plate; Round well shape; V-conical well bottom – improves sample recovery and decreases dead volume; Manufactured using high-quality, medical-grade virgin polypropylene (PP) resin for superior quality and performance of the storage plate - provides excellent chemical resistance to solvents such as DMSO, EtOH, and IPA, minimizes the risk of extractables and leachables, and finally ensures high temperature stability (-80°C to + 121°C); Low binding PP maximizes recovery of valuable samples; Clean room manufactured from molding to final packaging to ensure repeatability and the absence of contamination; Abgene storage plate applications comprise compound storage, High Throughput Screening (HTS), genomics, and cell culture; Certified DNase, RNase, and human DNA free for demanding applications such as molecular biology (nucleic acid manipulation) or compound storage; Offers storage security for assays, compound libraries or storing samples for either intermediate or long-term use; Allows increased well volume for maximum sample stored per plate; Designed to ANSI standards achieving compatibility with a variety of automated liquid handling applications for high throughput workflows; Multiple sealing solutions are available including adhesive or heat seals (0.8 mL max well volume), cap strips (0.7 mL max well volume), and sealing mats (0.55 mL max well volume) along with sealing equipment (e.g. ALPS30 manual heat sealer) specially designed to deliver efficient, secure sealing and minimize evaporation and contamination of samples for instance when performing PCR or during sample storage; For research use only, not for use in diagnostic procedures

Part number: 701350

BRAND® 1.1 mL 96-deep well U-bottom plate

BRAND® 1.1 mL 96-deep well plate; Round wells with U-shaped (round) bottom - ensure optimal sample mixing and collection; Made from high-purity and transparency polypropylene (PP) resin which enables good visual inspection and provides good chemical resistance to commonly used solvents such as DMSO, phenol, chloroform; The raised edges of the well allow for secure closure and therefore a better protection from contamination; Features alphanumeric coding and cut-away corner to simplify sample identification and plate orientation, respectively; The compact, standard ANSI/SLAS format allows for automated processing; Suitable for use with multichannel pipettes and automated liquid handling systems; Optimal sealing options (i.e., matching sealing mats, self-adhesive sealing films) are available to ensure secure storage; Sealing mats are ideal for short-term storage and reliably protect samples against contamination and evaporation - the maximum filling volume with compatible sealing/ cover mat (BRAND, P/N 701360) is 0.99 mL; Space-saving, stackable format for easy storage

Eppendorf 0.5 mL 96-deep well protein LoBind® plate, yellow frame

Eppendorf 0.5 mL 96-deep well plate; Yellow frame border; Round colorless wells with round bottom; Protein LoBind® properties - a special, two-component polymer mix creates a hydrophilic surface that ensures optimized recovery rates of valuable samples by significantly reducing sample binding to the surface (low protein binding affinity); Specially designed for use in protein research or with sensitive proteomic assays where protein concentration tends to be very small and sample recovery is vital for assay results; Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; RecoverMax® well design - optimized well geometry for minimal remaining/dead volume and excellent mixing properties; Raised well rims and a smooth surface ensure reliable sealing; Ideal for preparation and/or storage of protein, peptide or antibody samples - more protein can be recovered for downstream analyses; Suitable for enzymatic assays - the hydrophilic surface reduces denaturing effects and enzymes remain active; Recommended for collection and storage of viral samples - prevents sample loss during storage; Can be used for storage of cell suspension; High-contrast unique OptiTrack® matrix - up to 30 % faster sample identification and fewer pipetting errors

Eppendorf 2 mL 96-square deep well plate, yellow frame

Eppendorf 2 mL 96-deep well plate; Yellow frame border; Square clear wells with a round and smooth design of internal corners - prevent capillary effects (wicking) and reduce the risk of cross-contamination: Conical well bottom; Made of high-quality polypropylene (PP) - provides high resistance to chemicals and mechanical stress, and high tolerance to temperature extremes; PCR clean; Features a unique and easy-to-read OptiTrack® matrix, a laser-applied, high-contrast alphanumeric labeling of wells - allows rapid identification of samples and helps reducing pipetting errors; RecoverMax® well geometry - rounded edges in combination with optimized well bottom design maximize sample recovery and support excellent mixing properties; Ensures minimal residual/dead volume especially in automated applications and high uniformity from well to well, thereby achieving consistent and reliable application performance; Features raised well edges and smooth surface for reliable sealing including heat sealing; High g-Safe® centrifugation stability for faster processing and better sample quality; Manufactures without slip agents, plasticizers or biocides (leachables), substances that negatively affect bioassays results, thus eliminating the risk of interference for highest sample integrity; Suitable for various manual and automated applications such as sample storage at -86°C, sample preparation, DNA denaturation at 100°C, high throughput nucleic acid isolation, storage of genomic and oligonucleotide libraries, plasmid purification, and creation of dilution series; Comply with the SBS/ANSI standard dimensions; Enables seamless integration in automated systems; Easily stackable and sealable

Eppendorf twin.tec® 96-well semi-skirted PCR plate

Eppendorf twin.tec® 96-well PCR plate; Colorless frame; Semi-skirted; One-piece design – combines a polycarbonate (PC) frame and polypropylene (PP) wells for optimum performance; Features an exceptionally solid, robust PC frame for ultimate rigidity and torque resistance; Certified PCR clean; PP clear conical wells with improved well-to-well tolerance; 250 μL maximum well volume when used with cap strips (strips with eight microcaps, with a flat or domed shape); Extremely thin-walled wells guarantee optimum and consistent heat transfer to the sample; Raised well rims provide effective sealing and reduce the risk of cross-contamination; Ideal for quantitative real-time PCR and standard PCR amplification; Suitable for small volume sample handling; Fits most thermal cycles; The semi-skirted design allows for labelling or barcoding (upon request); OptiTrack® matrix for faster sample identification and fewer pipetting errors; NOTE: North America order no. 951020303

Eppendorf twin.tec® 96-well skirted LoBind® PCR plate

Eppendorf twin.tec® 96-well PCR plate; Green frame; Fully skirted; One-piece design – combines a polycarbonate (PC) frame and polypropylene (PP) wells for optimum performance; Features an exceptionally solid, robust PC frame for ultimate rigidity and torque resistance; Certified PCR clean; PP clear conical wells with DNA LoBind® properties - a combination of special manufacturing technologies and selected polypropylene batches ensures maximum recovery rates of nucleic acids by significantly reducing their adsorption to the wall of the wells (low DNA binding affinity, nearly 100% recovery of DNA/RNA molecules); Free of surface coatings, thereby eliminating the risk of sample contamination; The low profile design enables low volume PCR; 150 µL maximum well volume when used with cap strips (strips with eight microcaps, with a flat or domed shape); Extremely thin-walled wells guarantee optimum and consistent heat transfer to the sample; Raised well rims provide effective sealing and reduce the risk of cross-contamination; Ideal for quantitative real-time PCR with low sample concentration and PCR amplification with low template concentration; Suitable for low volume PCR/qPCR reactions and NGS DNA library preparation; Specially designed to reduce the loss of target molecules and maximize yields in PCR and other molecular assays for better sensitivity and improved assay results; Compatible with automated systems; Skirted design allows for optimal use with automation and for labelling or barcoding (upon request); Stackable; OptiTrack® matrix for faster sample identification and fewer pipetting errors

Falcon® 6-well cell culture plate, tilted wells

Falcon® 6-well cell culture plate; Round wells with flat bottom; Standard tissue culture-treated surface - a consistent tissue culture surface is produced using reliable and highly-controlled vacuumgas plasma treatment (well-to-well and plate-to-plate consistency); Surface treatment incorporates negatively charged functional groups that create a hydrophilic surface for cell attachment; Ensures reduced (cross-) contamination risk, low evaporation and minimal edge effects thanks to the unique labyrinth air passage system of the one-way lid, the individual condensation rings above each well, and the deep-well design; Suitable for cell/tissue cuture using aqueous reagents; Cell growth area is about 9.6 cm²; Trypsinization - Working wolume is 0.2-0.3 mL of Trypsin per well; Convenient, peelopen, medical-style packaging enabling aseptic product conservation; Stackable with plates with different well-sizes for efficient management of incubator space

FrameStar® 0.1 mL 96-well skirted low profile PCR plate, clear wells

FrameStar® 96-well skirted PCR plate; Low profile - decreases the «dead space» between the heated lid of the thermal cycler and the sample, which eliminates condensation forming on the side wall of the wells, preventing reduction in PCR volume and increasing the efficiency of the reaction; Displays 0.1 mL clear conical PP wells and a black PC frame with cut corner H1; Features ultra-smooth, uniform, thin-walled wells - enable optimal PCR and qPCR performance and results; The «RIG» option is characterized by an extra rigid skirt for use with automation systems - prevents the robotic gripper picking up more than one plate at a time; The rigid PC frame offers added mechanical stability and helps reducing thermal expansion and sample evaporation, thus delivering more consistent PCR results; The thermal stability of the rigid frame improves seal integrity; Specially recommended for low volume reactions (< 20 µL) such as low volume PCR; Compatible with the majority of standard 96- well PCR thermal blocks as well as real-time PCR and sequencing instruments; Lid option using the FrameStar® 96 NGS Lid (p/n 4ti-0287); Stackable

FrameStar® break-a-way PCR plate in 96x FrameStrip® adapter

FrameStar® 96-well break-a-way PCR plate; Semi-skirted plate with cut corner A12; Standard profile, clear 0.2 mL conical wells and purple frame; Divisible - vertically scored for easy separation into strips of 8 tubes or part plates (smaller plate sections); Utilizes the FrameStar® two-component technology, which combines the advantages of ultra-smooth, uniform, thin-walled polypropylene (PP) tubes for optimum PCR and real-time qPCR results, and a rigid polycarbonate (PC) frame for superior thermal stability of the plate during the PCR run; The FrameStar® two-component design prevents plate warping (distortion of tube strips) and thermal expansion which helps preserving the integrity of seals even at elevated temperatures, thus minimizing sample evaporation during thermal cycling and improving PCR results; The frame includes end tabs for easy handling and labelling, and alphanumeric grid reference to aid well and sample identification; Raised rims around each tube aid the prevention of cross-contamination between samples; Loaded into a 96-well format, skirted, white PC FrameStrip® adapter (Brooks Life Sciences, p/n 4ti-0370) - a 96-position plate that fits standard profile 8-tube strips or part plates perfectly, allowing for easy and secure handling; The adapter design includes locator pins on the deck to ensure 8-tube strips and part/full plate are always loaded in the correct orientation; The FrameStrip® adapter offers a solution for processing 8-tube strips or smaller plate sections in a plate format with automation platforms while maintaining flexibility for varying throughputs; The FrameStrip® adapter is supplied with a compatible clear polystyrene (PS) lid - provides protection for the strips during handling and shipping; FrameStar® plates are ideal for assay miniaturization due to improved level of seal integrity and minimal evaporation - reaction volumes can be reduced (downscaling) without any loss of assay sensitivity or consistency, leading to cost saving; Compatible with majority of thermal cyclers, real-time detection systems and sequencers; FrameStar® plates guarantee a reliable use on most automation platforms as plate distortion post-PCR is eliminated; Compatible with multichannel pipettes

FrameStrip® 8-well PCR tube strip in 96x FrameStrip® adapter

FrameStrip® 8-well PCR tube strip; Standard profile, clear 0.2 mL conical tubes and blue frame; Features a two-component design, combining the advantages of thin-walled polypropylene (PP) tubes for optimum PCR results and a rigid polycarbonate (PC) frame for easy and reliable handling; Ensures efficient heat transfer; The inert surface of tubes exhibits low binding capabilities for nucleic acids, proteins and other molecules; The frame portion, molded in a rigid polymer, provides improved mechanical stability for the strip compared with traditional single piece products; The frame includes end tabs allowing for easy handling and labelling of the strips; Loaded into a 96-well format, skirted, white PC FrameStrip® adapter (Brooks Life Sciences, p/n 4ti-0370) – a 96-position plate that fits up to 12 standard profile 8-tube strips perfectly, allowing for easy and secure handling; The adapter design includes locator pins on the deck to ensure 8-tube strips are always loaded in the correct orientation; The FrameStrip® adapter offers a solution for processing PCR tube strips in a plate format with automation platforms while maintaining flexibility for varying throughputs; The FrameStrip® adapter is supplied with a compatible clear polystyrene (PS) lid - provides protection for the strips during handling and shipping; FrameStrip® 8-well PCR tube strips offer a very flexible solution for PCR set-up with superior sealing (using strips of flat optical caps) and are compatible with the majority of thermal cyclers

Ordering product number:

Manufacturer: Greiner Bio-One

Part number: 781101

Greiner, 384-well standard microplate

384-well standard microplate; Rounded square wells - square geometry with rounded corners; Flat solid bottom; This design combines the advantages of the square well, i.e. increasing volume capacity and surface area, with the advantages of a round well, such as minimizing wicking and reducing air bubble formation; Displays a high degree of optical clarity; Facilitates assay miniaturization to very low reagent volumes and final working volumes as low as 10-15 μ l; Maximum well volume is considerabely reduced from 382 μ l to 138 μ l compared with a 96-well standard microplate; Stackable; This product (item # 781101) is only available at Greiner Bio-One North America (USA); For EU users, the same product is available at VWR (catalog # 82051-298)

Hard-Shell® 384-well skirted PCR plate, black/white

Hard-Shell® 50 µL 384-well PCR plate; Fully skirted – ideal for automation; Exhibits a black shell and white wells - ensure maximum reflection of fluorescent light in real-time PCR (gPCR) and other fluorescence assays (higher fluorescent signals) and reduce interfering background fluorescence (wellto-well crosstalk), thereby improving the sensitivity of qPCR reactions, reproducibility, and consistency of results; Characterized by a patented, rigid two-component design specifically engineered to withstand the stresses of thermal cycling, robotic handling and heat sealing; Features thin-wall wells allowing optimal thermal transfer (fast PCR) and superior well-to-well uniformity in optical assays such as those performed in realtime qPCR; Conical well bottom for maximum sample recovery; Delivers reliable performance in all PCR and real-time PCR applications; Features a white alphanumeric labeling for easy well identification; Footprint and well spacing match ANSI/SBS standard dimensions; NOTE: This product is no longer available (discontinued). The Hard-Shell® 384- well skirted PCR plate, clear/white (p/n HSP3805) is recommended as a replacement

Hard-Shell® 96-well low-profile skirted PCR plate, white/clear

Hard-Shell® 200 µL 96-well PCR plate; Fully skirted – provides a labeling surface and is ideal for automation; Exhibits a white shell and clear wells; Characterized by a patented, rigid two-component design specifically engineered to withstand the stresses of thermal cycling, robotic handling and heat sealing; The skirt and deck are made from a rigid thermostable polymer - prevents the distortion and shrinkage that may occur when regular single-component polypropylene PCR plates are exposed to high temperatures; The thin-wall wells are molded of virgin PP resin with low DNA binding properties, allowing optimal thermal transfer (fast PCR) and superior well-to-well uniformity in optical assays such as those performed in real-time gPCR; Conical well bottom for maximum sample recovery; Low-profile wells optimized for low-volume reactions and fast PCR reactions; The raised rims around each well ensure tight sealing using a variety of methods (e.g. pressure, adhesive and heat sealing); Sturdy plate with rigid skirt - well-suited for heat sealing; Warp-resistant plate - provides durability during automation, high-speed centrifugation, and storage (even at -80°C); Shows a superior stability and flatness allowing precise positioning and robotic handling; Delivers reliable performance in all PCR and real-time PCR applications; Features a black alphanumeric labeling for easy well identification; User-readable bar code options for convenient sample tracking in high-throughput settings; Footprint and well spacing match ANSI/SBS standard dimensions

ibidi, 96-well ibiTreat black µ-Plate w/ polymer coverslip bottom

96-well black µ-Plate; Quadratic (square) wells with 300 µL working volume and a clear, flat bottom - Exhibits excellent inner and whole plate flatness; Made of a black polymer material - black walls guarantee low well-to-well crosstalk in fluorescence microscopy; Features high-quality #1.5 ibidi Polymer Coverslip, which is a thin plastic coverslip that forms the bottom of the imaging plate with a standard No. 1.5 coverslip thickness of 180 μm (+10/-5 μm) and that exhibits extremely low birefringence and autofluorescence, similar to that of glass; ibidi Polymer Coverslip is gaspermeable allowing for partial gas exchange between the medium and the incubator's atmosphere (should not be covered); The hydrophilic « ibiTreat » surface of the plate bottom is physically treated for enhanced cell adhesion of most cell types, even without a defined protein coating, while fully retaining optical quality; ibiTreat surface is ideal for the direct culture of many adherent cell lines (including primary cells) that do not need any specific coating and offers optimal growth conditions for various cell-based assays (note that ECM protein coatings can be done on ibiTreat without any restrictions); Each well provides a coating area of 2.35 cm² and a growth area of 0.56 cm²; ibidi Polymer Coverslip is compatible with solvents commonly used for cell staining and fixation (e.g, Formaldehyde) and a list of recommended immersion oils (e.g., ibidi immersion oil, p/n 50101) when using oil immersion objectives; Meets all optical requirements for microscopes; Allows to perform high-resolution microscopy in a standard multi-well format through the ibidi Polymer Coverslip bottom with the highest optical quality and without any disruptive autofluorescence; Suitable for various imaging and fluorescence-based techniques with uncompromised resolution and choice of wavelength including phase contrast, DIC, widefield fluorescence imaging, confocal microscopy, two-photon microscopy, FRAP, FRET, FLIM, or LSFM; Designed for high-end microscopic analysis of fixed or living cells - To analyze cells, no special preparations are necessary. Cells can be directly observed live or fixed through the bottom, preferably on an inverted microscope; Optimized for high-throughput assays and screenings; For optimal results in fluorescence microscopy and storage of fixed and stained samples, mounting media (p/n 50001 and 50011) are available by ibidi; Useful in a wide range of applications including fluorescence microscopy, high throughput screening (HTS), high-resolution microscopy of cells, compound screenings (toxicology), large-scale transfection experiments, live cell and timelapse (for extended periods) imaging, and immunofluorescence staining and assays; Compatible with robotics, plate readers, and multichannel pipetting due to a standard ANSI/SLAS (SBS) microtiter plate format and well geometry; Suitable for use with fluorescence scanners; Features standard well numbering (A-H, 1-12); Temperature-stable up to 80°C/175°F; Stackable to save space in the incubator (up to 6 plates max due to stability reasons); Intended for one-time use and is not autoclavable; Shelf life under proper storage conditions (in a dry place, RT 15-25°C, no direct sunlight) is 36 months; Supplied with a lid; Sterilized and welded in a gas-permeable packaging

ibidi, 96-well ibiTreat black µ-Plate w/ polymer coverslip bottom

MicroAmp™ EnduraPlate™ 0.3 mL optical 96-well reaction plate w/ barcode

MicroAmp™ EnduraPlate™ 0.3 mL optical 96-well reaction plate with barcode; Semi-skirted – provides mechanical strength and a necessary side surface for robotic handling using grippers; Conical well bottom; Working volume of 0.2 mL; Standard well profile - delivers standard reaction speed; Flat deck enabling a universal fit with most thermal cycles and facilitating sealing and handling; Features thin-walled, clear polypropylene (PP) wells - allow for a snug fit to thermal blocks with excellent heat transfer from thermal block to sample for fast, efficient PCR amplification; The use of polypropylene helps minimize DNA, RNA, and enzymes from binding; The rigid polycarbonate frame ensures excellent mechanical stability and flatness during and after thermal cycling (no plate warping); Designed with raised well rims for effective sealing and reduced cross-contamination; Optimized for use with Applied Biosystems® instruments enabling optimal fit and high PCR/qPCR performance; Offers a great degree of durability for use with automation and multi-instrument experiments (e.g., endpoint thermal cycler -> real-time PCR system -> genetic analyzer); Well suited to high-throughput applications and robotic handling; Features easy-to-read, printed black well identification that helps to minimize pipetting mistakes and improves sample preparation productivity; ANSI/SBS compliant construction; Can be stored at room temperature

96-PCR Plate Domino [218.2212]

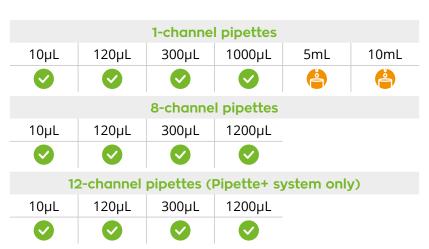

Ordering product number:

MicroAmp™ 0.2 mL Fast Optical 96-well semi-skirted reaction plate

MicroAmp™ 0.2 mL Fast Optical 96-well reaction plate; Semi-skirted – provides mechanical strength and a necessary side surface for robotic handling using grippers; Conical well bottom; Working volume of 0.1 mL; Low well profile - the reduced well height helps minimize evaporation and enhances thermal conductivity to deliver fast reaction speed; Raised deck required for some thermal cycler lids and instruments, helping to balance lid pressure without the need for adapters; Constructed from a single rigid piece of polypropylene (PP) in a 96-well format – can withstand rapid changes in temperature and helps to minimize absorption of reaction components; Consistent well-to-well thickness - ensures all samples are processed uniformly in all wells; Designed to increase the thermal contact with the Veriti™ 96-Well Fast Thermal Cycler for faster and more uniform heating; Guarantees maximum thermal conductivity for precise thermal cycling; Temperature accuracy and reaction uniformity reduce experimental artefacts, thereby generating reproducible and accurate PCR results; Depending on the size of fragments to amplify, combining the MicroAmp™ microplate with the adequate pre-mixed Fast PCR master mix and the Veriti™ 96-Well Fast Thermal Cycler helps reduce PCR/cycling reaction time for fragment amplification (e.g., 25 min for fragments < 500 bp from genomic backgrounds) or the generation of specific amplicons optimal for high-quality sequencing results (e.g., using AmpliTaq Gold™ Fast PCR Master Mix); Compatible with Applied Biosystems™ PCR thermal cyclers, realtime PCR systems and genetic/DNA analyzers; with engraved/molded alphanumeric labeling for well/sample identification; May be stored at room temperature; without barcode

Multiply® 96-well non-skirted PCR plate

Multiply® 96-well PCR plate; Conical well bottom; without skirt/frame; High-profile - full-height, standard wells; High-profile PCR plates are not optimal for low volume reactions because of the potential large dead space separating the heated lid of the thermal cycler and the sample - this increases the risk of condensation on the side wall of the tube, reducing the PCR volume and hindering the efficiency of the reaction; Fits in most thermal cyclers for end-point PCR; Suitable for real time qPCR; Sealing using either transparent flat top push cap strips or adhesive films

Nunc[™] 6-well cell culture-treated plate

Nunc™ 6-well cell culture plate; Round wells with flat bottom; Nunclon™ Delta-treated surface - promotes maximum adhesion for a broad range of cell lines; The hydrophilic property conferred by the Nunclon™ Delta treatment enables adherent cells to attach and grow; Culture area is about 9.6 cm² per well; Raised well rims - lowering the risk of cross-contamination; Recessed areas around wells act as a water reservoir to reduce evaporation from wells; The open format with the raised well rim enables convenient and secure manipulation of the cells; Offers excellent optical quality; Suitable for all areas of cell culture including scale-up and cloning; Features a vented lid for optimal gas exchange - notched corners facilitate one-way lid orientation; Stackable; The recommended working volume depends largely on the cell line and working conditions - it is approximately 3 mL for the 6-well multi dish, but may have to be modified for best performance

TPP 12-well tissue culture test plate

TPP tissue culture test plate; 12 wells; Made of clear, transparent Polystyrene (PS) for excellent viewing; Flat (F-base) growth surface of 3.466 cm²; The growth area, precisely on the spherical zone of the well only but not its sidewall, is opto-mechanically activated for optimal adhesion of cells to the plastic surface, resulting in plane and growth enhancing surface that has an optimal proliferation effect; The air-venting system of the lid consists of spacer cams located on the inside of the lid that guarantee controlled and constant gas and moisture exchange with minimal evaporation for optimal aeration of the culture; Designed for the cultivation and growth of cells as well as for cell-based assays, such as cell viability and microbial growth assays; Not suited for use in ELISA tests due to the low binding capacity of the TPP plate; Maximum medium volume of 5 mL per well; Recommended working medium volume of 1-2 mL per well; Exhibits excellent optical characteristics; Suitable for precise photometric measurements (the measuring light is not distracted by the geometry) as well as microscopy applications (bottom reading); Compatible with an appropriate adjustment on common absorption plate readers and cell imaging systems; Recommended for measurements at >300 nm; Not suitable for luminescence measurements; Features a yellow marking area on the side of the lid and the plate for writing and correct lid orientation: The sloped corner allows placement of the lid in one position only; The ridged grip area ensures a secure grasp and better handling and prevents from accidentally lifting off the lid; A black alpha-numerical labelling is used on the side for quick and easy identification of wells; The clear alpha-numerical identification mark next to each well simplifies the orientation during operations under microscope; The stacking rim enables safe stacking of several plates, also in combination with other TPP plates of different well number; The air vents in the plate base or the bottom rim provide consistent air-flow and heat distribution in the incubator even between stacked plates and consequently prevent condensation; For centrifugation, the use of suitable rotors or centrifuge adapters is recommended; Shows a uniform base area in accordance with the recommendations of ANSI 1-2004; For research use only and not intended for use in clinical, diagnostic or therapeutic procedures; Intended for single use only; Storage before use at room temperature and protect from UV light

Ordering product number:

Manufacturer:

ibiui

Part number: 82426

ibidi, 24-well ibiTreat black µ-Plate w/ polymer coverslip bottom

24-well black µ-Plate; Round, ID 14 mm wells with 1 mL working volume and a clear, flat bottom - Exhibits excellent inner and whole plate flatness; Made of a black polymer material - black walls guarantee low well-towell crosstalk in fluorescence microscopy; Features high-quality #1.5 ibidi Polymer Coverslip, which is a thin plastic coverslip that forms the bottom of the imaging plate with a standard No. 1.5 coverslip thickness of 180 µm (+10/-5 μm) and that exhibits extremely low birefringence and autofluorescence, similar to that of glass; ibidi Polymer Coverslip is gas-permeable allowing for partial gas exchange between the medium and the incubator's atmosphere (should not be covered); The hydrophilic « ibiTreat » surface of the plate bottom is physically treated for enhanced cell adhesion of most cell types, even without a defined protein coating, while fully retaining optical quality; ibiTreat surface is ideal for the direct culture of many adherent cell lines (including primary cells) that do not need any specific coating and offers optimal growth conditions for various cell-based assays (note that ECM protein coatings can be done on ibiTreat without any restrictions); Each well provides a coating area of 4.4 cm² and a growth area of 1.54 cm²; ibidi Polymer Coverslip is compatible with solvents commonly used for cell staining and fixation (e.g, Formaldehyde) and a list of recommended immersion oils (e.g., ibidi immersion oil, p/n 50101) when using oil immersion objectives; Meets all optical requirements for microscopes; Allows to perform high-resolution microscopy in a standard multi-well format through the ibidi Polymer Coverslip bottom with the highest optical quality and without any disruptive autofluorescence; Suitable for various imaging and fluorescence-based techniques with uncompromised resolution and choice of wavelength including phase contrast, DIC, widefield fluorescence imaging, confocal microscopy, two-photon microscopy, FRAP, FRET, FLIM, or LSFM; Designed for high-end microscopic analysis of fixed or living cells - To analyze cells, no special preparations are necessary. Cells can be directly observed live or fixed through the bottom, preferably on an inverted microscope; Optimized for high-throughput assays and screenings; For optimal results in fluorescence microscopy and storage of fixed and stained samples, mounting media (p/n 50001 and 50011) are available by ibidi; Useful in a wide range of applications including fluorescence-based imaging of living or fixed cells, high throughput screening (HTS) in cell culture, wound healing experiments with ibidi Culture-Inserts, large-scale transfection experiments as well as immunofluorescence assays; Compatible with automation equipment due to the standard ANSI/SLAS (SBS) plate format and dimensions; Suitable for use with fluorescence scanners; Features standard well numbering (A-D, 1-6); Temperature-stable up to 80°C/175°F; Stackable to save space in the incubator (up to 6 plates max due to stability reasons); Intended for onetime use and is not autoclavable; Shelf life under proper storage conditions (in a dry place, RT 15-25°C, no direct sunlight) is 36 months; Supplied with a lid; Sterilized and welded in a gas-permeable packaging

HardShell 96-well low-profile skirted PCR plate, blue/clear

HardShell 96-well PCR plate; Blue rigid frame (shell) with clear wells; Fully skirted for optimal robotic handling and labeling surface; Low-profile wells (16.05 mm) are optimized for low-volume reactions and fast PCR; Recommended reaction volumes of 5 to 125 μL (200 μL maximum); Uniform, thin-walled wells of polypropylene facilitate rapid and precise heat transfer and reduce well-to-well variability in optical assays; The rigid, two-component design provides superior stability and flatness, allowing precise positioning for automation; Specifically designed to withstand the stresses of robotic handling and thermal cycling; Footprint and well spacing match ANSI/SBS standard dimensions; Compatible with automated systems; with black lettering for easy well identification; For research use only, not for use in diagnostic procedures

Nunc™ Edge™ 96-well cell culture-treated microplate

Nunc™ Edge™ 96-well microplate; Round wells with flat bottom; Low flange design – ensures reliable handling in robotic operations; Nunclon™ Delta-treated surface – promotes maximum cell attachment and growth; Nunclon™ Delta cell-culture treatment is certified for monolayer formation, cloning efficiency, non-cytotoxic, non-pyrogenic, and sterility; Culture area is about 0.35 cm² per well; Features a surrounding/large perimeter built-in moat divided into 4 sectional reservoirs, each can be filled with 1.7 to 2.0 mL sterile water or media – serves as an evaporation barrier during extended incubation, enhancing cell viability and significantly reducing well-to-well variability across the entire plate; The uniquely engineered Nunc Edge 2.0 96-well plate is designed to minimize evaporation of cell culture medium from the plate and the risks associated with the "edge effect" that may occur on a standard 96-well plate; Suitable for various applications including cell-based assays, binding assay, high throughput screening; The use of the Nunc Edge 2.0 96-well plate can increase the throughput of assays by 37.5% over that of typical cell-based assays that use only the 60 inner wells of the plate; Compliant with the ANSI microplate standards; Compatible with robotic liquid handling stations as well as automated cell detection and cell analysis equipment (e.g. Thermo Scientific™ Varioskan™ LUX); When used with the Thermo Scientific™ Varioskan™ LUX multimode microplate reader, the filled moat of the plate functions as passive humidity control, allowing for simultaneous incubation and signal detection during long-term applications with living cells inside the plate reader without significant evaporation of the liquid in the sample wells; Supplied with a lid that maximizes ventilation while maintaining sterility; RECOMMENDATION: Replenish fluid in the reservoirs every 3 days in the humidified incubator to ensure the effectiveness of the evaporation barrier

ValitaCell

Part number: VAL003

Valita®Titer assay plate

Standard 96-well microtitre plate; Flat well bottom; Half area well design - utilize the same well spacing as a regular 96-well plate, but contain wells with half the diameter of a typical 96-well plate, enabling miniaturization to lower assay volumes (save on rare and expensive reagents by reducing the amount of reagent needed per well) while retaining ease of pipetting and readability by most standard plate readers; Opaque black walls - reduce/minimize well-to-well crosstalk and background fluorescence during fluorescent assays as well as light scattering; Made from not-treated, medium binding polystyrene that provides a hydrophobic surface capable for binding biomolecules via passive interactions; Each well is coated with FITC-labelled protein used as a specific fluorescent probe for detection of target IgG antibody; Specially produced for the Valita®Titer assay intended for rapid, high-throughput quantification of IgG antibodies or IgG-Fc fusion proteins in liquid samples (e.g. cell culture supernatant or cell culture media) using fluorescence polarization, FP (2.5 mg/L - 100 mg/L of IgG); Achieves a precise QA/QC determination of IgG titer levels for selecting the best cell line during biomanufacturing; Conforms to standard microplate footprint and dimensions - compatible with a wide range of microtitre FP plate readers such as PHERAstar Plus plate reader (BMG LA-BTECH); Recommended working volume of 25 to 125 µL; Pipetting sample volumes < 5 µL is not recommended; Store at 2-8°C in an upright position; Single use only

WebSeal 0.5 mL 96-well V-bottom plate

Thermo Scientific™ WebSeal 96-well non-coated microplate; Shallow well format; Round wells; Conical well bottom - ensures complete sample recovery; 0.5 mL total volume; The high-quality noncoated material guarantees low background noise - GC-tested to ensure low extractables; Features an excellent chemical resistance and a broad solvent compatibility including alcohols, acetonitrile and other common HPLC solvents; Exceptional temperature tolerance; Ideal for high demanding applications such as pharmaceutical and industrial QA/QC, high-throughput screening (HTS) and combinatorial chemistry; Suitable for sample collection and storage as well as liquid phase assays

WHEATON® 500 µL 96-well U-bottom medium µLplate®

WHEATON® 500 µL 96-well µLplate®; Medium well format; Round wells; Round well bottom; Part of the patented MicroLiter Plate Sampling System - MicroLiter's proprietary 96-well microplates for chromatography applications; Can be used with inserts; Two sealing options (EVA pierceable well covers or resealable silicone mats with sprayed-on PTFE barrier) are available to use with µLplates - provide secure sample containment (optimal security and stability) throughout the analytical sample run and, if necessary, reseal after the sample has been injected; Manufactured to ANSI specifications for 96-well microplates - guarantee easy integration into automated workflows

TIPS

Manufacturer: Sartorius

Part number: Variable

Sartorius 10 μ L to 1200 μ L Optifit non-filtered tips

Sartorius 10 µL to 1200 µL Optifit pipette tips; Non-filtered; Made of virgin polypropylene; Designed for best fitting and leak-tight sealing on Waters Bluetooth pipettes (manufactured by Sartorius based upon the Picus® range of electronic pipettes), ensuring maximum pipetting accuracy, performance and precision; Enable ergonomic, light tip attachment and ejection by being compatible with the Optiload® and Optiject® features of Sartorius electronic pipettes; High-quality standard tips and excellent solution for various applications; Supplied in various packaging types for all needs, i.e., single tray racks (purity certified), refill packs (purity certified), refill towers, FlexiBulk® boxes, and standard bulk; Optifit tip trays are colour-coded for easy matching with a corresponding, colourcoded pipette; purity certified tips are manufactured in ISO 8 classified clean room conditions to avoid any contaminations and are tested for DNase, RNase and endotoxins per each tip lot; Presterilized and low retention (fully hydrophobic and highly liquid-repellent surface) tips are available for sterile work and maximum sample recovery, respectively; Low retention format is beneficial in sensitive biochemistry and molecular biology applications, where reagents often contain viscous substances and detergents (e.g. PCR, sequencing, protein purification and analysis); Other options include extended (for better reach) and wide-bore tips for specific needs; Fully autoclavable (121°C, 20 minutes)

TIPS

Manufacturer:

Sartorius

Part number: Variable

Sartorius 10 µL to 1200 µL Safetyspace™ filter tips

Sartorius 10 µL to 1200 µL SafetySpace™ filter tips; Tips are made of virgin polypropylene (PP) and the filter of polyethylene (PE) without any self-sealing additives (avoid any interference with the sample and the results); Designed for best fitting and leak-tight sealing on Waters Bluetooth pipettes (manufactured by Sartorius based upon the Picus® range of electronic pipettes), ensuring maximum pipetting accuracy, performance and precision; Enable ergonomic, light tip attachment and ejection by being compatible with the Optiload® and Optilect® features of Sartorius electronic pipettes; The filter barrier provides protection against (cross-)contamination of samples and/or the pipette shaft in demanding applications such as molecular biology, microbiology, cell culture and radioactive work; Offer more space between the sample and the filter than conventional filter tips, which prevents the risk of the liquid coming into contact or permeating the filter; The extra space is particularly useful when handling foaming liquids such as buffers and proteins, pipetting solvents, using multiple dispensing functions of electronic pipettes or reverse pipetting; Supplied pre-sterilized and purity certified (Free of DNase, RNase, endotoxins) packed in colour-coded single tray racks for easy matching with a corresponding, colour-coded pipette; Available in low retention format (fully hydrophobic and highly liquid-repellent surface for maximum sample recovery) - beneficial in sensitive biochemistry and molecular biology applications, where reagents often contain viscous substances and detergents (e.g. PCR, sequencing, protein purification and analysis); Not available in 5 mL and 10 mL volume range

16x90mm Glass Tube Domino [218.2781]

Ordering product number :

Manufacturer: KANG JIAN Medical

Part number: KJ502-19C

13x84mm collection tube, virus preservation medium

Labeled, skirted (self-standing), 13x84 mm sample collection and storage tube with internal round bottom filled with virus preservation medium; Features a PP screw cap; Convenient for collection and transportation of viruses such as Coronavirus, virus of flu, bird flu, hand-foot and mouth disease, measles, etc; Especially suitable for the collection and inactivation of 2019-nCoV; Withstands high temperature variations without deformation (121°C, 15min) or embrittlement (-196°C); Enables secure processing by centrifugation and shaking; Leakage proof; Contains 1-2 mL of preservation medium including virus lysates and nucleic acid preservation additives - inactivate viruses in collected specimens and maintain the integrity of viral nucleic acids at room temperature for up to 7 days; Viral RNA samples can be used for direct RT-PCR analysis without RNA extraction (preservation solution can be used as a template for RT-PCR reaction) or for high throughput sequencing; Glass beads inside the tube facilitate elution, thereby releasing more viruses into the preservation solution; Used with sterile, nylon-flocked swab for efficient sample collection and complete release of samples into the preservation solution

Manufacturer: COPAN Diagnostics, Inc

Part number: 330C

16x100mm collection tube, COPAN UTM® medium

Individual, labelled, skirted (self-standing), 16x100 mm screw-cap plastic tube with distinctive internal conical shape filled with 3 mL UTM® medium; The product is referred as UTM® 330C; COPAN UTM® for Universal Transport Medium System, is an FDA cleared collection and transport system intended for collection, transport, maintenance and long-term freeze storage of clinical specimens containing viruses (including COVID-19), chlamydia, mycoplasma or ureaplasma organisms, from the collection site to the testing laboratory; UTM-RT® is room temperature stable - maintains the viability of organisms for up to 48 hours at room or refrigerated temperature (2-25°C) and does not require refrigeration storage prior to collection; The UTM-RT® system consists of a Hanks' Balanced Salt Solution (HBSS) enriched with proteins and sugars, a buffer solution to maintain a neutral pH (pH 7.3 ± 0.2) and a phenol red pH indicator that provides a visual gauge of the medium integrity throughout the storage and life of the product; The UTM-RT® formulation includes antibiotics and antimycotics to inhibit bacterial and fungal growth, maintain cellular integrity, and encourage preservation of viruses, chlamydia, mycoplasma and ureaplasma; The medium test tube contains three glass beads that facilitate the mixing and dispersion of patient sample material and release of virus particles during vortexing; The cost efficient large 3 mL media fill volume allows for multiple tests on the same specimen; The skirted test tube with internal conical bottom enable easy centrifugation of samples and allows the tubes to stand upright on the laboratory bench; The plastic tube is safe and shatterproof; UTM® has been used successfully for rapid antigen testing, DFA (Direct Fluorescent Antibody), viral culture and for molecular-based assays; UTM-RT® can be processed using standard clinical laboratory operating procedures for viral, chlamydial, mycoplasma and ureaplasma culture; The medium test tube must be stored in its original packaging at a temperature between 2 and 25°C until the time of use (do not overheat or freeze prior to use!); The UTM-RT® System is ready for use and requires no further preparation; Swab not included, Bulk packaged; Single-use device for professional in vitro diagnostic use; NOTE: After collection, the specimen should be stored at 2-25°C and processed within 48 hours. If delivery and/or the processing is delayed, over 48 hours, specimens should be transported in dry ice and once in the laboratory, frozen at -70°C or colder

Ø12.5mm Tube and Vial Domino [218.4901]

Ordering product number:

Manufacturer: ArcticWhite LLC

Part number: CV3090103

ArcticWhite, 3 mL self-standing external thread cryovial with lip seal

ArcticWhite, 3 mL external thread cryogenic vial; 12.5x71 mm size; Self-standing design with an internal round bottom; Supplied with a screw cap with a specially designed lip on the inside that ensures a leakproof seal even at very low temperatures; Tube and cap are both made from polypropylene; Cap can be colour-coded using a cap insert

Microtube Domino [218.2152]

Ordering product number :

Manufacturer: Azenta Life Sciences

Part number: 68-1001-11

Azenta 0.9 mL external thread dual-coded tube in 96x rack

Azenta 0.9 mL external thread, dual-coded tube; Loaded in a 96-format SBS rack (high-base rack) with a linear barcode on the side to be read more easily (Azenta Life Sciences, p/n 66-61002); Sealable with a PP, automation-friendly screw cap (a deforming compression, non-silicone seal preventing the cap from being over-tightened) that provides flexibility to use tubes across a range of automated tube handling platforms - features a double-start thread for a reliable, secure, and consistent screw cap seal as well as facilitating automation; Leak tested to ensure sample security; The external thread improves sample safety (reduces chances of cross-contamination) while maximizing sample storage volume (provides higher working volume than internally threaded tubes); Features a high-contrast, permanently laser-etched 2D code and a human-readable number on the tube base, ensuring a permanent link between sample and data; 2D code is reliably readable without removing tubes from rack, thereby enabling a more streamlined workflow; Guarantees the highest level of sample security, management, and tracking in high-density storage applications; Suitable for long-term, secure storage of samples in biobanks, compound libraries, and a broad range of biological and chemical materials, including cryogenic storage to -196°C in vapor phase liquid nitrogen (Not for use in liquid phase nitrogen); Compatible with low throughput manual, semi-automated or fully automated workflows on integrated platforms; Supplied capped and racked

DURAN® 17 mL 16x130mm test tube with straight rim

DURAN® 17 mL test tube; 16x130 mm size; with straight rim and a round bottom; 1.0 - 1.2 mm wall thickness offering exceptional mechanical strength; Manufactured from borosilicate glass 3.3, clear – provides excellent chemical resistance, virtual inert behavior, high light transparency, and minimal thermal expansion giving relatively high resistance to temperature changes (has a high maximum usage temperature); Considered as universal cylindrical laboratory glassware often used for chemical reactions, pretreatments as well as for transferring and storing substances or small amounts of liquid; Suitable to carry out reaction controls, test series, and preliminary samples; Features a fired-on, highly durable white ceramic; Reusable and autoclavable

EndoGrade® 5 mL glass test tube

Endotoxin-free 5 mL glass test tube with aluminum screw cap; Depyrogenated by dry heat - contains < 0.005 EU/mL of endotoxin; Features a plain edge - stand-alone ability; Wall thickness of 0.95 mm; Ideal vessels for the dilution or aliquoting of test samples and for the dilution of endotoxin standards; Allows for convenient endotoxin-free pipetting; Suitable for use with endotoxin detection assays such as EndoLISA® and EndoZyme® as well as for sample collection after EndoTrap® endotoxin removal; Supplied ready to use; Reusable - rinse tube and cap 3x with ultrapure water, dry, close tube with screw cap, and bake (heat) at 200°C for at least 4 hours to ensure endotoxin-free conditions; NOTE: Store at 15-25°C

Eppendorf 0.5 mL DNA LoBind® microtube

Eppendorf 0.5 mL microtube; Conical bottom; DNA LoBind® properties - a combination of special manufacturing technologies and selected polypropylene batches ensures optimized recovery rates of nucleic acids by significantly reducing sample-to-surface binding (low DNA binding affinity, nearly 100% recovery of DNA/RNA molecules); Free of surface coating (e.g., silicone) to minimize the risk of sample interference; Certified PCR clean; Exhibit a high centrifugation stability and chemical resistance; with attached lid - precise sealing for minimal evaporation; Ideal for preparation and long-term storage of nucleic acids samples; Suitable for various applications including forensic trace analysis, preparation of dilution series in quantitative qPCR, preparation of master mixes for PCR reactions, restriction analysis, DNA-microarray hybridization, sample preparation for NGS, and creation of genomic or oligonucleotide libraries

Eppendorf 5 mL Tube® with screw cap

Eppendorf 5 mL screw-cap Tube®; Eppendorf Quality™; Colorless; Conical shape - exhibits the same diameter and bottom shape as 15 mL conical tube and therefore is compatible with the same accessories; Features an HDPE (High-Density Polyethylene) secure screw cap with flattened and grooved sides that provide optimal grip and user-friendly handling; Made of exceptionally high-quality, virgin, transparent polypropylene (PP) without the use of slip agents, plasticizers, and biocides that could leach out of plastic consumables and negatively affect experiments by interfering with the results and measurements of various bioassays (e.g. enzyme activity or receptor-binding assays) – provides a safe solution for sample preparation and storage to achieve the highest reliability and consistency of biological test results; Low wetting characteristic; High chemical resistance; Offers a broad operating temperature range from -86 to +100 °C; Provides high centrifugation stability - offers maximum safety and stability for centrifugation up to 25,000 x g) for reliable, fast, and efficient protocols; Very useful for working with medium-sized sample volumes - allows for simple and safe sample preparation and easy processing of sample volumes up to 5 mL; Guarantees higher yields in DNA isolation even from samples with a limited quantity of source material (e.g. low-copy plasmid DNA) by increasing the culture volume; Suitable for cell-based applications including contamination-free cell culture and safe cell/tissue lysis; Allows for easier sample access associated with a lower risk of spillage, significantly reducing the risk of contamination; Convenient for the preparation of master mixes and buffers, eliminating the need for splitting large volumes across several smaller tubes; Can be used for routine preparation, mixing, centrifugation, incubation, and safe storage of solid and liquid samples as well as solutions and reagents in volumes up to 5 mL; Space-saving solution – Less storage space needed; Equipped with a graduation and a labelling area for identification; Intended for research purposes only – NOT suitable for use in diagnostic or therapeutic applications; Do NOT use in liquid nitrogen

Eppendorf 5 mL Tube® with snap cap

Eppendorf 5 mL snap-cap Tube®; Eppendorf Quality™; Colorless; Conical shape – exhibits the same diameter and bottom shape as 15 mL conical tube and therefore is compatible with the same accessories; Features an easy-access snap cap for simple, practical and ergonomic single-handed operation; The hinged cap helps minimize sample evaporation during prolonged incubation and storage time; Made of exceptionally high-quality, virgin, transparent polypropylene (PP) without the use of slip agents, plasticizers, and biocides that could leach out of plastic consumables and negatively affect experiments by interfering with the results and measurements of various bioassays (e.g. enzyme activity or receptor-binding assays) - provides a safe solution for sample preparation and storage to achieve the highest reliability and consistency of biological test results; Low wetting characteristic; High chemical resistance; Offers a broad operating temperature range from -86 to +80°C, and up to ≥+100°C when sealed with a tube clip (remove the clip once the tube has cooled down; Do NOT centrifuge the tube with the clip!); Provides high centrifugation stability – offers maximum safety and stability for centrifugation up to 25,000 x g) for reliable, fast, and efficient protocols; Very useful for working with medium-sized sample volumes - allows for simple and safe sample preparation and easy processing of sample volumes up to 5 mL; Guarantees higher yields in DNA isolation even from samples with a limited quantity of source material (e.g. low-copy plasmid DNA) by increasing the culture volume; Suitable for cell-based applications including contamination-free cell culture and safe cell/tissue lysis; Allows for easier sample access associated with a lower risk of spillage, significantly reducing the risk of contamination; Convenient for the preparation of master mixes and buffers, eliminating the need for splitting large volumes across several smaller tubes; Can be used for routine preparation, mixing, centrifugation, incubation, and safe storage of solid and liquid samples as well as solutions and reagents in volumes up to 5 mL; Space-saving solution – Less storage space needed; Equipped with a graduation and a labeling area for identification; Intended for research purposes only - NOT suitable for use in diagnostic or therapeutic applications; Do NOT use in liquid nitrogen

5mL Round Bottom Tube Domino [218.2242]

Ordering product number:

Manufacturer: Corning Inc.

Part number: 352070

Falcon® 50 mL conical centrifuge tube

Falcon® 50 mL centrifuge tube; Conical bottom; Hydrophobic, biologically inert surface for good cell or protein recovery; Provided with a chemically resistant HDPE flat-top screw cap; Temperature stability - suitable for long-term storage of specimens/samples at low/frozen temperatures (-80°C); Chemical resitance to alcohols and mild organic solvents (not recommended for extraction procedures); Suitable for various applications including cell pelleting, purification and precipitation of nucleic acids, and centrifugation of precipitates; Can be used for preparing, containing and storing solutions such as media, buffers or chemical solvents; Features blue printed graduations and a white writing patch

Matrix™ 0.5 mL V-Bottom screw-top tube in 96x rack

Matrix™ 0.5 mL storage tube; Conical well bottom shape for maximal sample recovery; Medical grade PP screw-top cap with silicone O-ring/ gasket - ensures sample preservation and improves seal integrity; Features a permanent, unique 2D barcode laser-etched onto the base of each tube - securely identify and track samples; Compatible for use with common aqueous solutions (e.g. glycerol, PEG, Acetonitrile, TE, DEPC) as well as alcohols (e.g. ethanol, methanol) and DMSO; Loaded into a barcoded, stackable, ANSI/SLAS microplate footprint, 96-format latch rack (Thermo Scientific, p/n 4900) - maximizes storage space while maintaining traceability and readability, also compatible with multichannel pipettes and automated liquid handling devices; The rack is made of polycarbonate with acetal latches and provides permanent 2D, linear and human-readable codes on its three sides; Ideal solution for secure long-term storage of precious samples (e.g. blood components, DNA and bacteria) at low temperatures including vapor-phase liquid nitrogen; Access to individualized samples on the rack eliminate multiple freeze/thaw cycles

Micronic

Part number: MP52318I

Micronic 1.1 mL 2D-coded internal thread V-bottom tube in 96x rack

Micronic 1.1 mL 2D Data-Matrix coded screw-cap sample storage tube; Flat outer tube bottom; Inner V-shaped (conical) bottom – helps achieve a maximum sample recovery and the lowest dead volume; Internal thread - provides optimal sealing for storage at low temperatures; The screwcap tube features a single turn thread for easy opening and closing of the tube; Manufactured from medical-approved, ultra-pure grade polypropylene (PP); Exhibits a low protein binding and extractable-free internal surface; Guarantees high resistance to many organic solvents such as DMSO, methanol, and dichloromethane; Offers superior mechanical strength and high tolerance to temperature extremes - can be used in a large temperature range, in cryogenic temperatures down to vapor-phase liquid nitrogen, LN2 (between -150°C and -196°C, depending on the location and the distance away from the liquid nitrogen vessel) up to +100°C; Supplied uncapped, snap bulk - the «snap» feature enables tubes to be locked into the rack wells to prevent sample loss from overturned racks; Works equally well with either screw caps or TPE push caps for secure sealing depending on storage conditions – for effective cryogenic storage, a screw cap with silicone O-ring is recommended to allow for the tightest seal possible, whereas for storage from -80°C and above, either a push cap or screw cap can be used; Provides a high fill rate with a working volume of 0.8 mL when used with a screw cap or 0.9 mL when used with a push cap; The unique Data-Matrix 2D code, permanently laser-etched on the black code surface on the tube bottom, guarantees reliable long-term sample identification – 2D codes are proven to be chemically and mechanically resistant and can be easily read by scanners and readers; Loaded into a Micronic 1D barcoded 96-3 tube storage rack with a low cover (Micronic, p/n MP51207) that accommodates up to 96x individual Micronic 1.1 mL tubes with internal thread, capped with either push caps or low profile screw caps; The 96-well format rack has an automation-friendly, standard ANSI/SLAS dimensional footprint; The Micronic Ultra-Low Temperature (ULT) 96-3 rack is made from the highest purity polycarbonate (PC) with excellent properties for low-temperature conditions (vapor phase LN2 to +140°C), which makes it ideal for long-term use in automated cryogenic storage facilities and has many unique features including its extremely strong design for minimal deformation due to temperature changes, a novel "icebreaker" cover lock mechanism for cryogenic storage, a highly transparent cover for easy visual checking of the enclosed samples, and a combination of laser-etched alphanumeric coding on top of the rack serving as visual location aids and a unique laser-etched 1D barcode with a human-readable code on the A1-H1 side of the rack for proper traceability; The storage rack features closed sidewalls with minimal notches for perfect rack orientation and an open-bottom design to facilitate quick defrosting of samples; The Micronic storage rack is suitable for use with automated handling and sample storage systems (-20°C, -80°C, and lower temperatures) and features a Twist-Lock design that prevents tubes from turning during screw (de)capping; The high-quality Micronic tubes ensure that the integrity of samples is preserved at ultra-low temperatures over extended periods of time; Micronic tubes are used to fully track and trace valuable samples throughout the entire sample storage process; The Micronic rack is autoclavable; NOT recommended for use in liquid phase nitrogen

Micronic 3 mL 2D-coded external thread Flat-bottom tube in 48x rack

Micronic 3 mL 2D Data-Matrix coded screw-cap sample storage tube; Flat outer tube bottom; Inner flat bottom; External thread hybrid - optimizes the working volume of the tube by allowing for a higher volume of material to be stored and helps improve sample integrity by minimizing the risk of cross-contamination; Provides a high fill rate with a working volume of 2.9 mL; The screw-cap tube features a triple start thread that ensures optimal sealing quality for long-term sample preservation and storage at ultra-low temperatures; The screw cap is designed with a unique lock when sealed to prevent it from overturning manually or mechanically; Manufactured from medical-approved, ultra-pure grade polypropylene (PP); Offers a low protein binding surface; Exhibits thick tube walls, sturdy design, and excellent properties for ultra low-temperature storage down to vapor-phase liquid nitrogen (LN2); Features white sidewalls with highcontrast, permanently laser-etched 1D barcode and numeric human-readable code on one sidewall (the other side is blank for own labeling) in addition to a unique, chemically-resistant 2D Data-Matrix code laser-etched on the white code surface on the tube bottom - this 4 coding options combine automated and visual sample identification during the storage/ retrieval process or field research and guarantee sample traceability; The bottom code surface of the tube has a raised edge, which protects the 2D Data-Matrix code against mechanical damage; The transparent parts of the tube wall enable easy visual checking of the sample; Loaded into a Micronic 1D barcoded 48-3 tube storage rack with a high cover (Micronic, p/n MP51302) that accommodates up to 48x individual Micronic 3 mL tubes with external thread, capped with screw caps; The 48-well format rack has an automation-friendly, standard ANSI/SLAS dimensional footprint; The Micronic Ultra-Low Temperature (ULT) 48-3 rack is made from the highest purity polycarbonate (PC) with excellent properties for low-temperature conditions (vapor phase LN2 to +140°C), which makes it ideal for longterm use in automated cryogenic storage facilities and has several unique features including its extremely strong design for minimal deformation due to temperature changes, a novel "icebreaker" cover lock mechanism for cryogenic storage, a highly transparent cover for easy visual checking of the enclosed samples, and a combination of laser-etched alphanumeric coding on top of the rack serving as visual location aids and a unique laser-etched 1D barcode with a human-readable code on the A1-H1 side of the rack for proper traceability; The storage rack features closed sidewalls with minimal notches for perfect rack orientation and an open-bottom design to facilitate quick defrosting of samples; The Micronic storage rack is suitable for use with automated handling and sample storage systems (-20°C, -80°C, and lower temperatures) and features a Twist-Lock design that prevents tubes from turning during screw (de)capping; The high-quality Micronic tubes ensure that the integrity of samples is preserved at ultra-low temperatures over extended periods of time; Micronic 3 mL tubes with external thread increase overall sample storage efficiency and are used to fully track and trace valuable samples throughout the entire sample storage process; The Micronic rack is autoclavable; NOT recommended for use in liquid phase nitrogen

Ordering product number:

Manufacturer: Thermo Scientific

Part number: 339652

Nunc™ 50 mL conical centrifuge tube

Nunc™ 50 mL centrifuge tube; Conical bottom for maximum sample recovery; Made from high-purity polypropylene (PP); The inner surface is biologically inert; Supplied with a plug sealed, grooved screw cap for user-friendly opening/closing of the tube; Guaranteed leakproof to help protect samples and reagents from leaking out; Chemically-compatible with the most commonly used reagents; Offers a higher RCF rating (up to 17,000 xg) when fully supported by conical rotor cavity or conical adaptor, which enables a greater range of applications from low speed to superspeed centrifugation; Considered as a convenient and safe alternative to glass without sacrificing accuracy; Designed for functionality, flexibility, and ease of use; Features graduations and a large writing area for labeling; Disposable

Ordering product number: 186010159

Manufacturer: LVL technologies Part number:

Part number: 2DNC-X05-BL-NS-SLP-L

SAFE® 2D MX 500 external thread tube in 96x rack

SAFE® 2D coded, 500 µL medium size storage tube with external thread (MX 500) loaded into a 96x ANSI/SBS standard footprint rack with a slide lock lid (LVL technologies, p/n RCK-MX96SLP-L); Tubes feature a white on black, permanent data matix code laser-etched on their base (2D bottom code) - highly resistant to chemical and thermal influences, easily legible thanks to excellent contrast, enabling fast and reliable identification of samples; Without 1D side barcode and human readable; Closure with external thread - minimizes risks of cross-contamination comparing to solutions with internal thread; Pre-capped with blue screw caps characterized by a special, patented two-phase TPE compression, which guarantees a tight seal against liquid leakage (sealing of the liquid phase) and minimizes the ingress and leakage of potential gases (sealing of vapour phase), thereby enabling safe, long-term storage; SAFE® 2D Tubes are made of low binding pure polypropylene ensuring reaction-free sample storage; Tubes have polished surface for excellent transparency and visual control of content volume; SAFE® 2D Tubes display an outer flat bottom for good legibility and an internal round (U-shaped) bottom for low dead volume; Tubes have an enlarged wall thickness for greater physical stability during the freezing process or in case of repeated freezing cycles (thermal resistance); The dimensional stability or the stable position of tubes in rack is crucial for easy picking; The 96 SBS rack is made of robust polypropylene and is extremely stable due to its geometric shape; The rack is labelled with a 1D code on its narrow side and a 2D orientated code on the bottom; The rack/tube system is stackable and compatible with automated systems (e.g; storage, liquid handling); SAFE® 2D Tubes and racks are suitable for storage at temperatures as low as -196°C in the vapour phase liquid nitrogen; SAFE® 2D Tubes are used for the storage and logisitics of valuable samples in various applications including biobanking, transfusion medicine, compound managment, kit manufacturing (e.g. oligos and other synthetic chemicals) and forensics; Sterilization comes as an added option and is recommended in forensics and for the storage of cells

Deepwell Microplate Domino [218.2301]

Ordering product number:

Manufacturer:

Sarstedt

Part number:

72.730.711

PRECAUTION

Insert Sarstedt 0.5 mL skirted microtube gently into the Domino slot. There is a risk that the microtube will get stuck if pressing too hard. The protruding ring, located just above the knurls, should remain outside the hole to ensure easy removal of the microtube after use.

Sarstedt, 0.5 mL skirted microtube with knurls

0.5 mL screw-cap microtube; Inner conical bottom; Skirted base; with knurls; without closure; without graduation

Part number: 1402-2500

TempAssure® 0.2 mL 8-tube strip in Vari-Plate™ 96x frame

TempAssure® 0.2 mL PCR 8-tube strip; PP thin wall tubes - ensure rapid and even heat transfer for reliable amplification reactions; Non-autofluorescent material; Features a pull-apart design enabling easy separation of microtubes; Provided with separate optical, flat 8-cap strips for sealing; Individual 8-tube strips are inserted into a Vari-Plate™ 96-well skirted frame (Azenta Life Sciences, p/n 4ti-0757-F) to form a complete or partial plate; The Vari-Plate™ frame is made of white, rigid polycarbonate - reduces thermal expansion and sample evaporation during PCR, leading to improved consistency in PCR results; The Vari-Plate™ frame has a standard microplate footprint - fits a wide variety of thermal/PCR cyclers and is compatible with standard multichannel pipettes

Ordering product number:

VACUETTE® 2 mL virus stabilization tube

Manufacturer: Greiner Bio-One

Part number: 456162

VACUETTE® 2 mL virus stabilization tube; 13x100 mm tube size; U-shaped bottom; Made of Polyethylene Terephthalate (PET); The tube is non-evacuated and the tube interior is sterile; Plastic tube with a pre-defined volume of a phosphate buffer saline (PBS) solution at a pH of 7.4 ± 0.2 (without RNase inhibitors) to allow for the storage of the swab specimens at 4°C for up to 72h; Fitted with a unique VACUETTE® safety cap - red cap/white inner ring; Innovative PREMIUM tube and unique screw thread type - features a Safety Twist Cap for maximum handling comfort and safety, ensuring hygienic, easy opening of the tube (no risk of blood splashes and aerosol effect) by a gentle, controlled twist movement (cannot be removed by a simple pull action) and secure transport due to firm hold of cap; Intended for the safe transport and storage of nasopharyngeal and oropharyngeal swab specimens including SARS-CoV-2 (to be used by healthcare professionals for SARS-CoV-2, influenza A and influenza B testing only); The use of PBS (including molecular grade PBS and other similar formulations such as Delbecco's PBS) is recommended by the FDA as an alternative to a universal medium for the stabilization, transport and storage of samples containing viruses (e.g. SARS-CoV-2) when universal transport media (UTM) for viruses is not available; Primary container for swab specimens - ensures sample stabilization from the point of collection to arrival at a testing laboratory where viral RNA can be extracted and detected using nucleic acid amplification techniques; with paper label; Store tubes at 4-25°C; NOTE: Avoid exposure to direct sunlight. Exceeding the maximum recommended storage temperature may lead to impairment of the tube quality (i.e. drying out of liquid additives, coloring, etc.); For in-vitro diagnostic use; The tube is single use and can be used on a single patient only; Keep the sterile tube closed until use; INSTRUCTIONS FOR USE: Remove the cap from the VACUETTE® virus stabilization tube and immediately insert the swab containing the specimen into the tube (the length of the inserted swab should not exceed 90 mm) before securely closing the tube with the PREMIUM screw cap

5mL Round Bottom Tube Domino [218.2242]

Ordering product number:

VACUETTE® 3 mL K2EDTA collection tube

Manufacturer: Greiner Bio-One

Part number: 454246

VACUETTE® 3 mL K2EDTA blood collection tube; 13x75 mm size; Features a lavender, non-ridged safety pull cap with a black exterior ring (black ring indicates tube with standard draw volume) designed to minimize aerosol generation; Manufactured from virtually unbreakable, clear Polyethylene Terephthalate (PET) plastic; Evacuated tube for venous blood specimen collection with a pre-defined vacuum for exact draw volume; The interior of the tube wall is sterile and coated (spray-dried) with K2EDTA yielding a ratio of 1.8 mg/mL of blood when the evacuated tube is filled correctly to its fill volume - EDTA binds calcium ions and blocks the coagulation cascade; Not equipped with a gel separator; Provides a mean for collecting, transporting, and processing blood in a closed evacuated system for testing serum, plasma or whole blood in the clinical laboratory; Designed for use in the examination of whole blood in hematology applications; May be used for testing in routine immunohematology, i.e., red cell grouping, Rh typing and antibody screens or for viral marker testing in screening and clinical laboratories; Can be used in the closed mode with direct sampling analyzers; The performance characteristics of this device have not been established for testing plasma in molecular diagnostics in general; Singleuse container; For in vitro diagnostic use; Store at 4-25°C

VACUETTE® 4 mL Z No Additive collection tube

Manufacturer: Greiner Bio-One

Part number: 454001

VACUETTE® 4 mL blood collection tube; 13x75 mm tube size; U-shaped bottom; Made of Polyethylene Terephthalate (PET); Version "Z No Additive" - the tube does not contain any chemical additive, but is evacuated and the tube interior is sterile; Plastic tube with a pre-defined vacuum for exact draw volumes; Fitted with a unique VACUETTE® safety cap – white cap/black inner ring; Innovative PREMIUM tube and unique screw thread type - features a Safety Twist Cap for maximum handling comfort and safety, ensuring hygienic, easy opening of the tube (no risk of blood splashes and aerosol effect) by a gentle, controlled twist movement (cannot be removed by a simple pull action) and secure transport due to firm hold of cap; Can be used as a discard tube or for the collection of venous blood; Recommended to collect, transport and process blood for testing serum, plasma or whole blood in the clinical laboratory (to be used only by trained healthcare professionals according to instructions of use); with paper label; without barcode; Store tubes at 4-25°C; NOTE: Avoid exposure to direct sunlight. Exceeding the maximum recommended storage temperature may lead to impairment of the tube quality (i.e. vacuum loss, coloring, etc.); For in-vitro diagnostic use; The tube is single-use and can be used on a single patient only

20mL Reaction Vial Domino [218.2361]

Ordering product number: 186010097

Manufacturer: Waters Corporation

Part number: 186000385C

Waters 1 mL LC/GC screw-top vial in 48x holder

Waters LC/GC certified autosampler 1 mL screw neck clear glass vial; Total recovery format – V-shaped bottom ensures total sample recovery; Threaded top; 12x32 mm vial size; Loaded into a vial holder with a capacity for 48 vials (Waters, p/n 700011047) – the 48x holder is compatible with ACQUITY UPLC® sample managers; Vials are tested for cleanliness by HPLC; Supplied with a screw neck cap and preslit PTFE/Silicone septum; Vials can be used in sample preparation for chemical analysis using liquid or gas chromatography techniques coupled or not with mass spectrometry

Waters 300 µL 12x32mm screw neck vial

Waters 300 μ L screw neck vial; 12x32 mm vial size; with internal V-shaped bottom for maximum volume recovery; Sample Limited vial format; Features a screw cap with preslit PTFE/Silicone septum; Clean-polypropylene-molded autosampler vial; Preferred in applications where there is a concern that compounds or molecules may stick to a polar glass surface; Offers a cost-effective alternative to glass; Well suited for sample preparation

Waters GlycoWorks™ 600 µL tubes in 96x plate

GlycoWorks™ 600 µL tubes; Round top; Conical bottom; Provided in a pull-apart 8-tube strip format within the GlycoWorks Sample Collection Module - Strips of 8 tubes are convenient for using an 8-channel pipette to process samples for higher throughput and efficiency (separate tubes as needed for the workflow and throughput); Used in the GlycoWorks RapiFluor-MS N-Glycan kit (Waters) for collecting SPE eluate (RapiFluor-MS labeled glycans) during the HILIC SPE clean-up step and subsequently diluting samples with GlycoWorks Sample Diluent-DMF/ACN prior to analysis; Recommended for injecting samples for LC-MS analysis; Loaded into a 96-well sample collection plate (Waters, p/n 186002481) to serve as direct collection/preparation inserts; The collection plate features 800 µL round wells with conical bottom, is SBS/ANSI compliant, and is well fitted for the vacuum manifold and 600 µL tubes; Strips of 8 pre-slit Silicone/PTFE cap mats are provided for capping the 8-strip format 600 µL inserts and are recommended for direct injection of samples after labeling and SPE - cut smaller lengths of the 8-strip mat as needed for the experiment

Waters QuanRecovery™ 300 µL 12x32mm screw neck vial

QuanRecovery™ 300 µL screw neck vial; 12x32 mm vial size; with internal V-shaped bottom for maximum volume recovery; Enabled by MaxPeak™ High Performance Surfaces (HPS) Technologies - designed to minimize peptide and protein sample losses due to analyte/surface interactions (e.g. ionic interactions and hydrophobic non-specific binding), achieving improved analyte recovery and sensitivity at high and low sample concentrations as well as repeatability of analytical results; LC-MS autosampler ready vial with low residual volumes to fully utilize small sample volumes; Ideal for demanding quantitative LC-MS analysis for proteins and peptides, and challenging assays for detecting analytes at low concentrations; Well suited for sample preparation

WHEATON® 10 mL clear glass serum vial

WHEATON® 10 mL serum vial; Clear glass; Crimp neck finish - securely sealed with aluminum crimp caps; Made from type I borosilicate glass tubing to ensure uniform wall thickness; Tubular design provides excellent clarity and dimensional consistency from vial to vial; Lighter weight compared to molded bottles; Withstands the challenges of low pressure and extreme temperature variations; Protects against changes in pH and maintain the purity of the contents; Blowback feature of neck and specially designed bottom radius add strength for freeze-drying applications; Ideal for lyophilization , packaging, and sampling applications
